10. What to Submit
11. What to Avoid
12. Submission of Tutorials & Assessments
13. Let's Answer Your Questions
14. Student Questions and Answers

Topic: Forms & Reports in MS Access

What we'll do today

- Learn how to make databases user-friendly with forms
- Create reports to summarise and present data
- Add simple navigation (main menu)
- Discuss database maintenance (backups, passwords)

Why it matters

- Tables are for storage → but users need friendly screens
- Reports turn raw data into professional documents
- Skills useful for real business tasks (e.g., invoices, order lists, staff reports in Australia)

Analogy (Australia):

- A Medicare card form = entering info through a form
- A Woolworths receipt = a report generated from transactions

Role of Forms

Forms are the *friendly face* of a database. Instead of typing into raw tables, you use a neat screen to enter and view data.

Analogy (Australia)

Like a Medicare form — you don't see the big system behind it, just a simple sheet asking for name, address, Medicare number.

Why use forms?

- Reduce mistakes
- Make data entry easier
- Allow built-in checks (validation)

Example

- **Table:** Customer
- **Form:** Screen to type customer name, email, postcode

What We Are Learning Today

Today's session is designed to help you complete your Week 7 tutorial.

We will go through key skills step by step using simple examples first.

These are the exact skills you need for your Week 7 tasks — we're just learning them step by step before you apply them yourself.

- Creating forms (Customer, Products, Employees)
- Adding a search feature (Combo Box)
- Building a main form with a subform (Customer Orders)
- Creating reports (Employee list, Customer Orders with totals)

How The Class Will Work

- Watch a short demonstration
- Try it yourself step by step
- Apply the same idea to your tutorial tasks (Ask questions anytime — that's how you learn best!)

Hands-On Activity 1: Creating a Customer Form

Access
App

 Open

Step 1: Open Your
Database

1. Open Access.

Hands-On Activity 1: Creating a Customer Form

Week 7: Tutorial activities [▲]

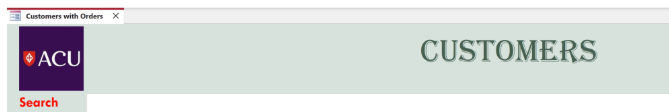

Do

Download the [Sample Access database](#)  (click on the link).

- If you receive a 'security warning' message in Access when opening the file, follow the steps provided in the [linked document](#)  to add your download folder to the trusted locations.

Create the following FORMS and REPORTS in the downloaded Access database.

1. Generate a form using the Form Wizard, incorporating every field from the **Customer** Then, refine the form's appearance to enhance user-friendliness and professionalism by adjusting fonts, colours, and field arrangement.
2. Generate a form using the Form Wizard, incorporating every field from the **Products** Then, refine the form's appearance to enhance user-friendliness and professionalism by adjusting fonts, colours, and field arrangement. Add a search combo box (dropdown list) based on the Product Name in the form header.
3. Generate a form using the Form Wizard, incorporating every field from the **Employee** Then, refine the form's appearance to enhance user-friendliness and professionalism by adjusting fonts, colours, and field arrangement.
4. Generate a form using the Form Wizard, incorporating every field from the **Customer** in the main form, and Order ID, Order Date, Product Name and Quantity from **Orders** table in the sub-form (see sample below). Then, refine the form's appearance to enhance user-friendliness and professionalism by adjusting fonts, colours, and field arrangement. Add A logo to the form header. Add navigation, add/delete and close buttons to the form footer. Remove the default navigation bar of the form.

2. Download Module 6&7 DB.accdb file from Canvas

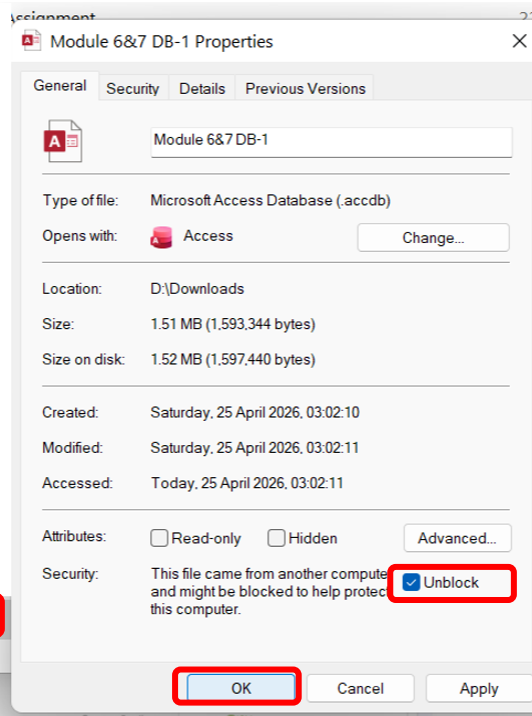

Hands-On Activity 1: Creating a Customer Form

Hands-On Activity 1: Creating a Customer Form

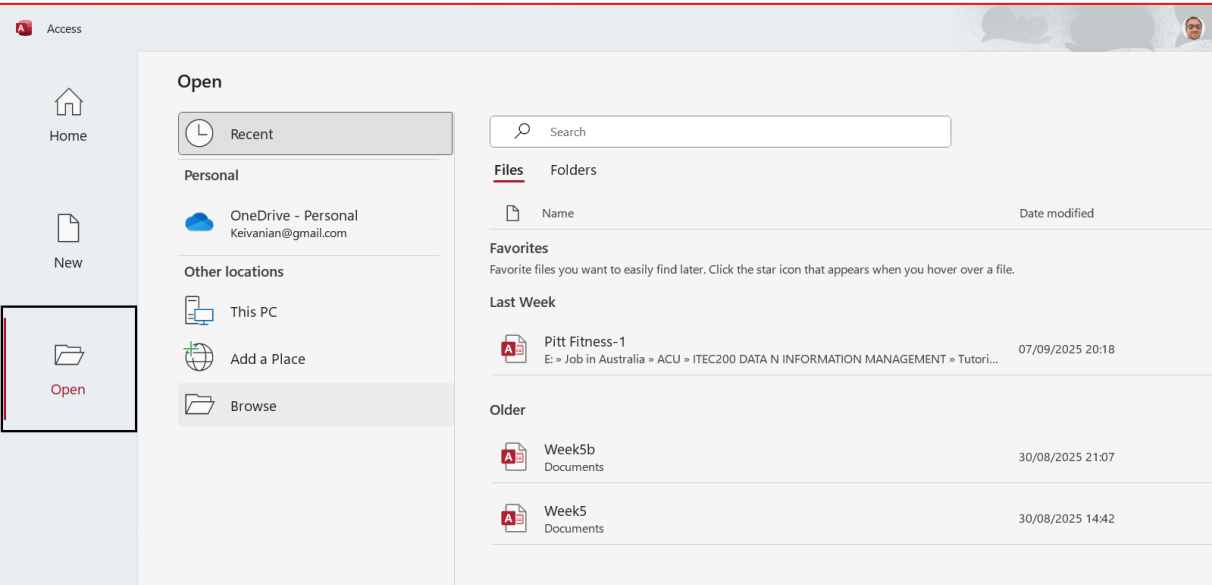

Right Click on DB file

>> Properties >>

Unlock

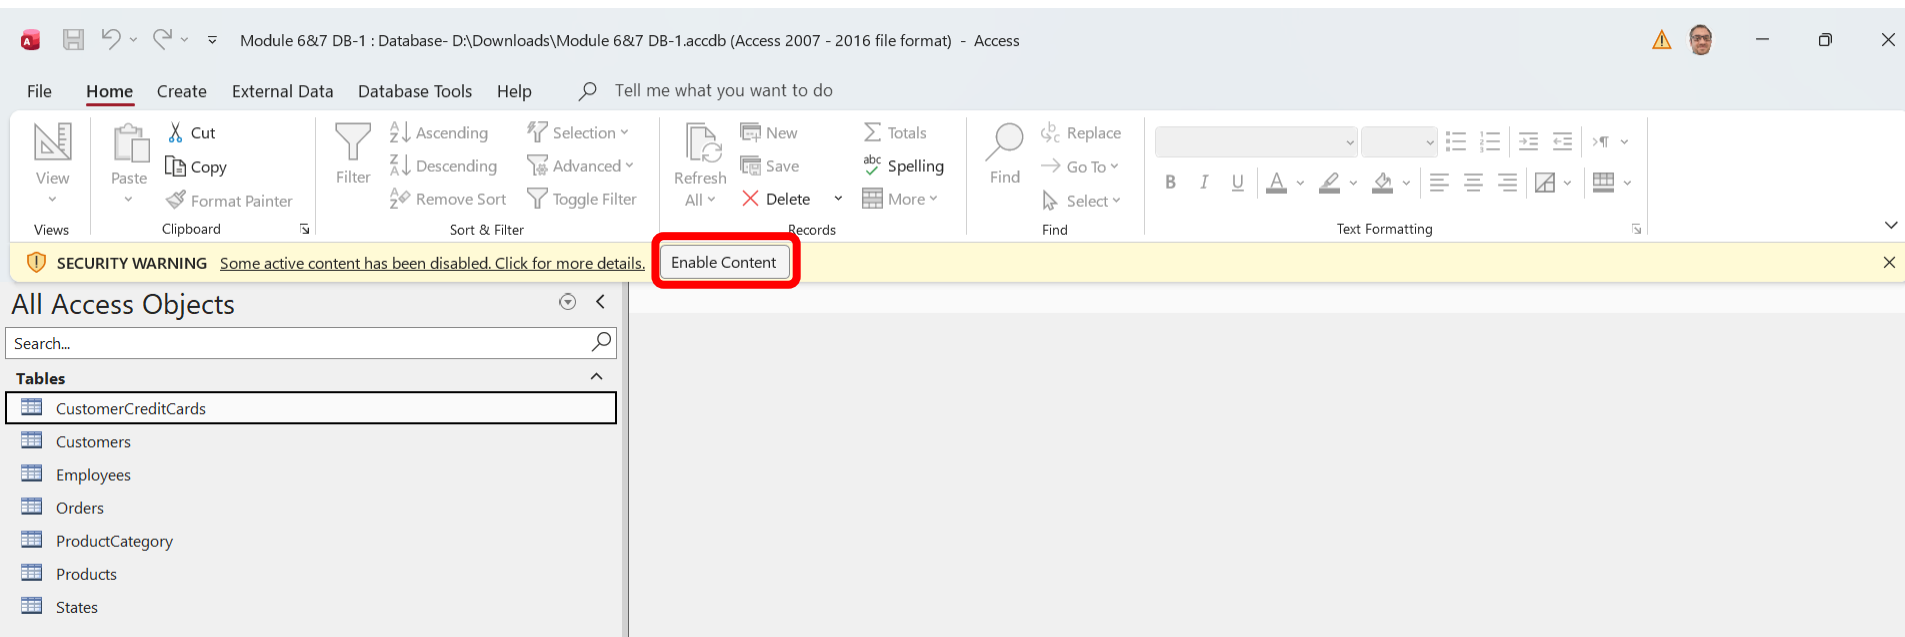

Hands-On Activity 1: Creating a Customer Form

3. Open the Tutorial Week 7 database.

Hands-On Activity 1: Creating a Customer Form

4. Enable Content

The screenshot shows the Microsoft Access application window. The title bar indicates the file is 'Module 6&7 DB-1 : Database- D:\Downloads\Module 6&7 DB-1.accdb (Access 2007 - 2016 file format) - Access'. The ribbon is set to 'Home'. A yellow security warning banner is visible, stating 'SECURITY WARNING Some active content has been disabled. Click for more details.' The 'Enable Content' button is highlighted with a red rectangle. The 'All Access Objects' task pane on the left shows a list of tables: CustomerCreditCards, Customers, Employees, Orders, ProductCategory, Products, and States. The 'CustomerCreditCards' table is selected.

- Form Wizard: quick and automatic.
- Form Design View: full control for layout.

Example:

- From the Products table → Build a form.
- Add a dropdown for Category.

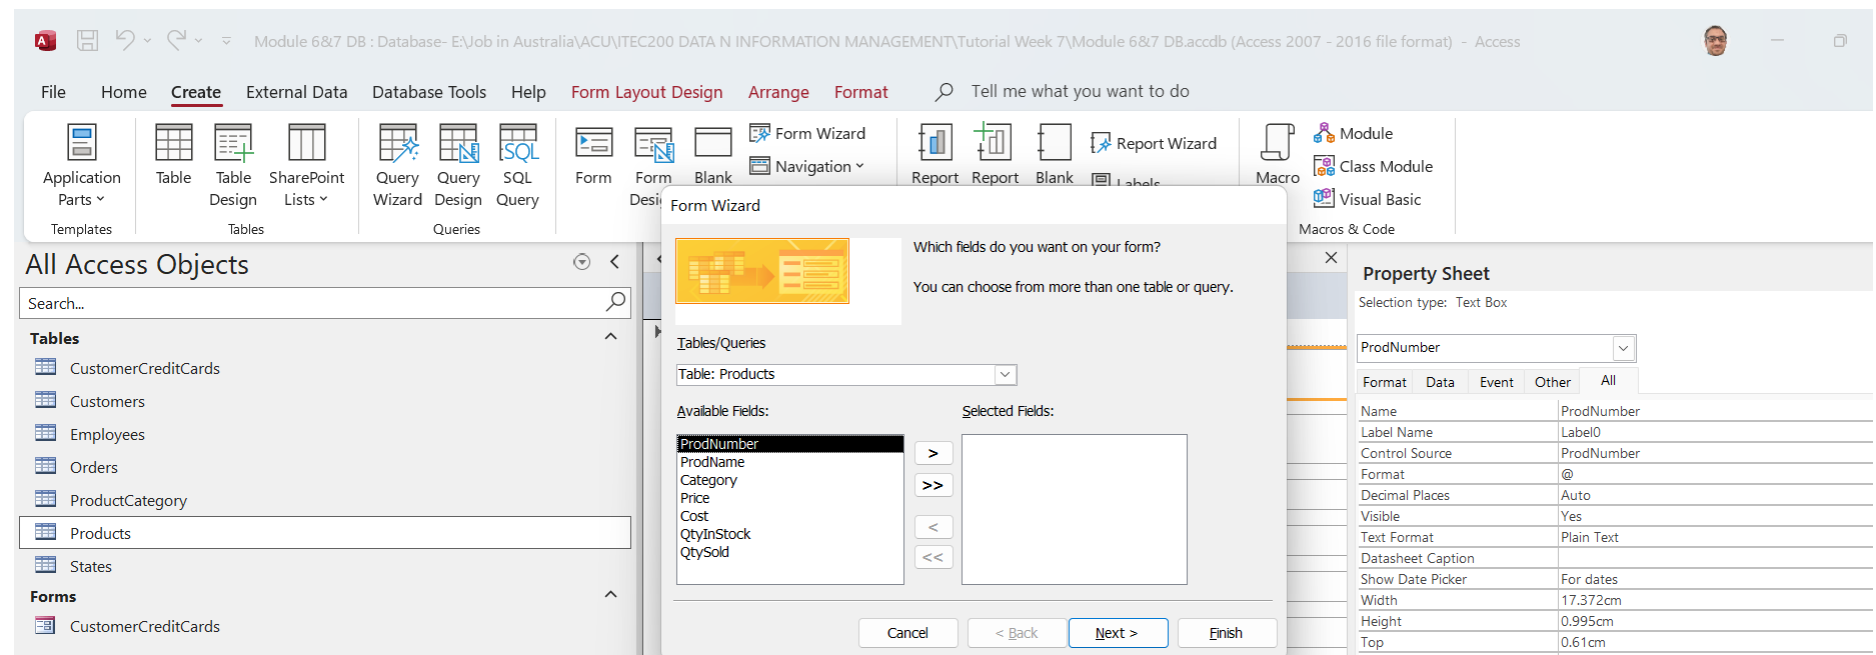

Comparison Table

Wizard	Design View
Fast, auto-layout	Manual, more control
Limited flexibility	Full customisation
Good for beginners	Good for polished results

Hands-On Activity 2: Building a Products Form with Search

Step 1: Create a Products Form with Wizard

1. Go to the Create tab.
2. Click Form Wizard.

The screenshot shows the Microsoft Access interface. The 'Create' tab is selected in the ribbon. The 'Form Wizard' button is highlighted in the 'Form' group. The 'Form Wizard' dialog box is open, showing the 'Which fields do you want on your form?' screen. The 'Table: Products' is selected in the 'Tables/Queries' list. The 'Available Fields' list includes ProdNumber, ProdName, Category, Price, Cost, QtyInStock, and QtySold. The 'Selected Fields' list is empty. The 'Next >' button is highlighted. The 'All Access Objects' pane on the left shows the 'Products' table selected. The 'Property Sheet' pane on the right shows the 'ProdNumber' field selected.

Hands-On Activity 2: Building a Products Form with Search

4. Move all fields to the right (>>).

The image shows a 'Form Wizard' dialog box. At the top, it asks 'Which fields do you want on your form?' and states 'You can choose from more than one table or query.' Below this, there is a 'Tables/Queries' section with a dropdown menu showing 'Table: Products'. The main area is divided into two columns: 'Available Fields:' on the left and 'Selected Fields:' on the right. The 'Available Fields' list is empty. The 'Selected Fields' list contains: 'ProdNumber', 'ProdName', 'Category', 'Price', 'Cost', 'QtyInStock', and 'QtySold'. Between the two lists are four buttons: '>', '>>', '<', and '<<'. The '>>' button is highlighted, indicating the action to move all fields from the available list to the selected list. At the bottom of the dialog are four buttons: 'Cancel', '< Back', 'Next >', and 'Finish'.

Form Wizard

Which fields do you want on your form?
You can choose from more than one table or query.

Tables/Queries
Table: Products

Available Fields:

Selected Fields:

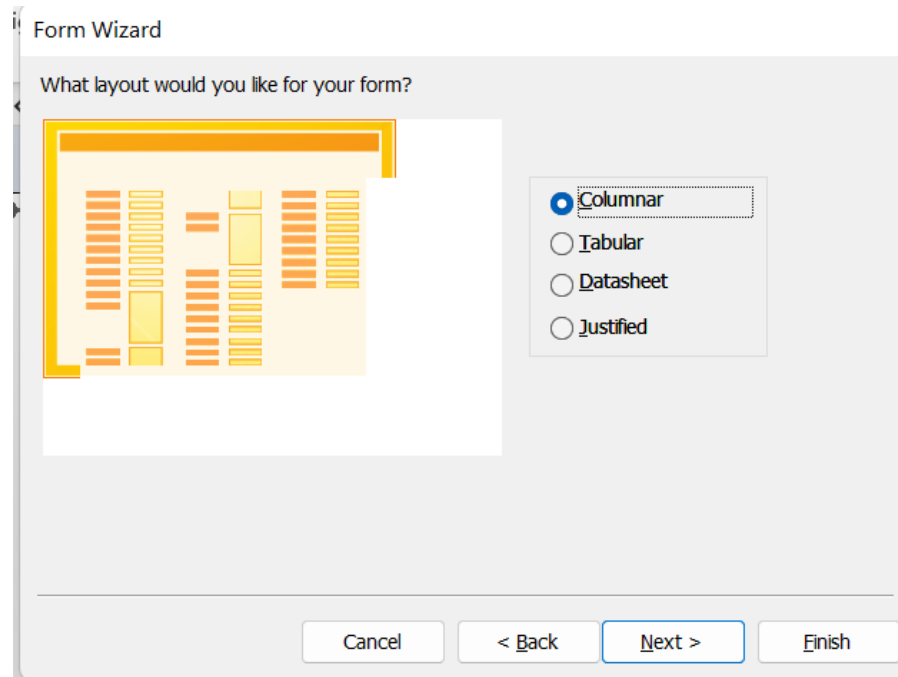

- ProdNumber
- ProdName
- Category
- Price
- Cost
- QtyInStock
- QtySold

Buttons: Cancel, < Back, Next >, Finish

Hands-On Activity 2: Building a Products Form with Search

5. Click Next → Choose Columnar layout → Next.
6. Name it Products Form → Finish.
→ Access will open the Products form automatically.

The image shows a 'Form Wizard' dialog box with the title 'Form Wizard'. The main question is 'What layout would you like for your form?'. On the left, there is a preview of a form layout with multiple columns and rows of input fields. On the right, there are four radio button options: 'Columnar' (selected), 'Tabular', 'Datasheet', and 'Justified'. At the bottom, there are four buttons: 'Cancel', '< Back', 'Next >', and 'Finish'.

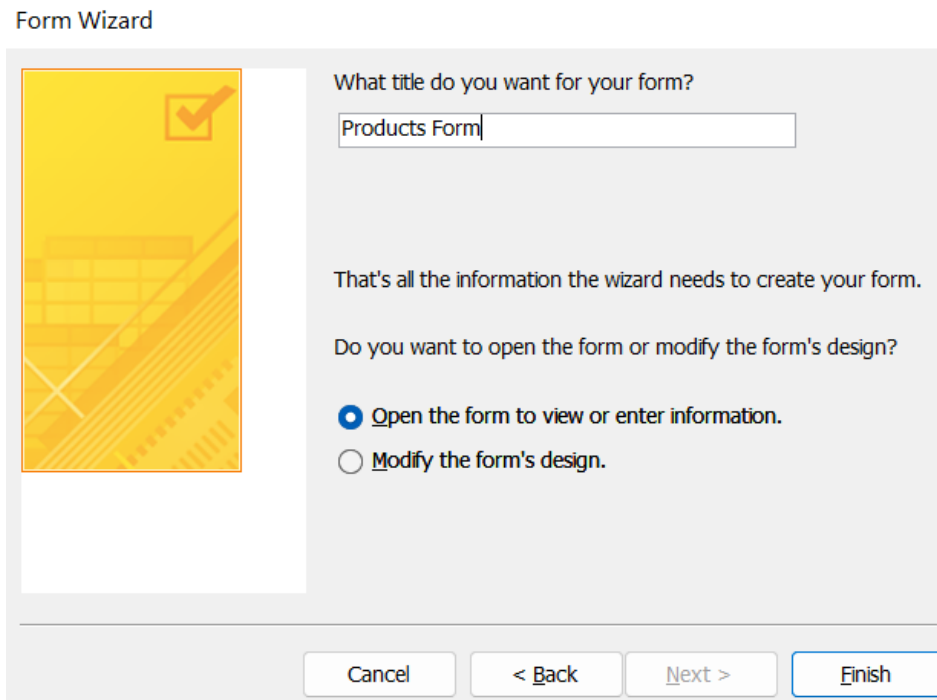

Hands-On Activity 2: Building a Products Form with Search

5. Click Next → Choose Columnar layout → Next.

6. Name it Products Form → Finish.

→ Access will open the Products form automatically.

Form Wizard

The image shows a 'Form Wizard' dialog box. On the left is a yellow square with a checkmark icon and a faint grid pattern. The main area contains the text 'What title do you want for your form?' followed by a text box containing 'Products Form'. Below this is the text 'That's all the information the wizard needs to create your form.' and 'Do you want to open the form or modify the form's design?'. There are two radio buttons: the first is selected and labeled 'Open the form to view or enter information.', and the second is labeled 'Modify the form's design.'. At the bottom are four buttons: 'Cancel', '< Back', 'Next >', and 'Finish'.

What title do you want for your form?

Products Form

That's all the information the wizard needs to create your form.

Do you want to open the form or modify the form's design?

☒ Open the form to view or enter information.

☐ Modify the form's design.

Cancel < Back Next > Finish

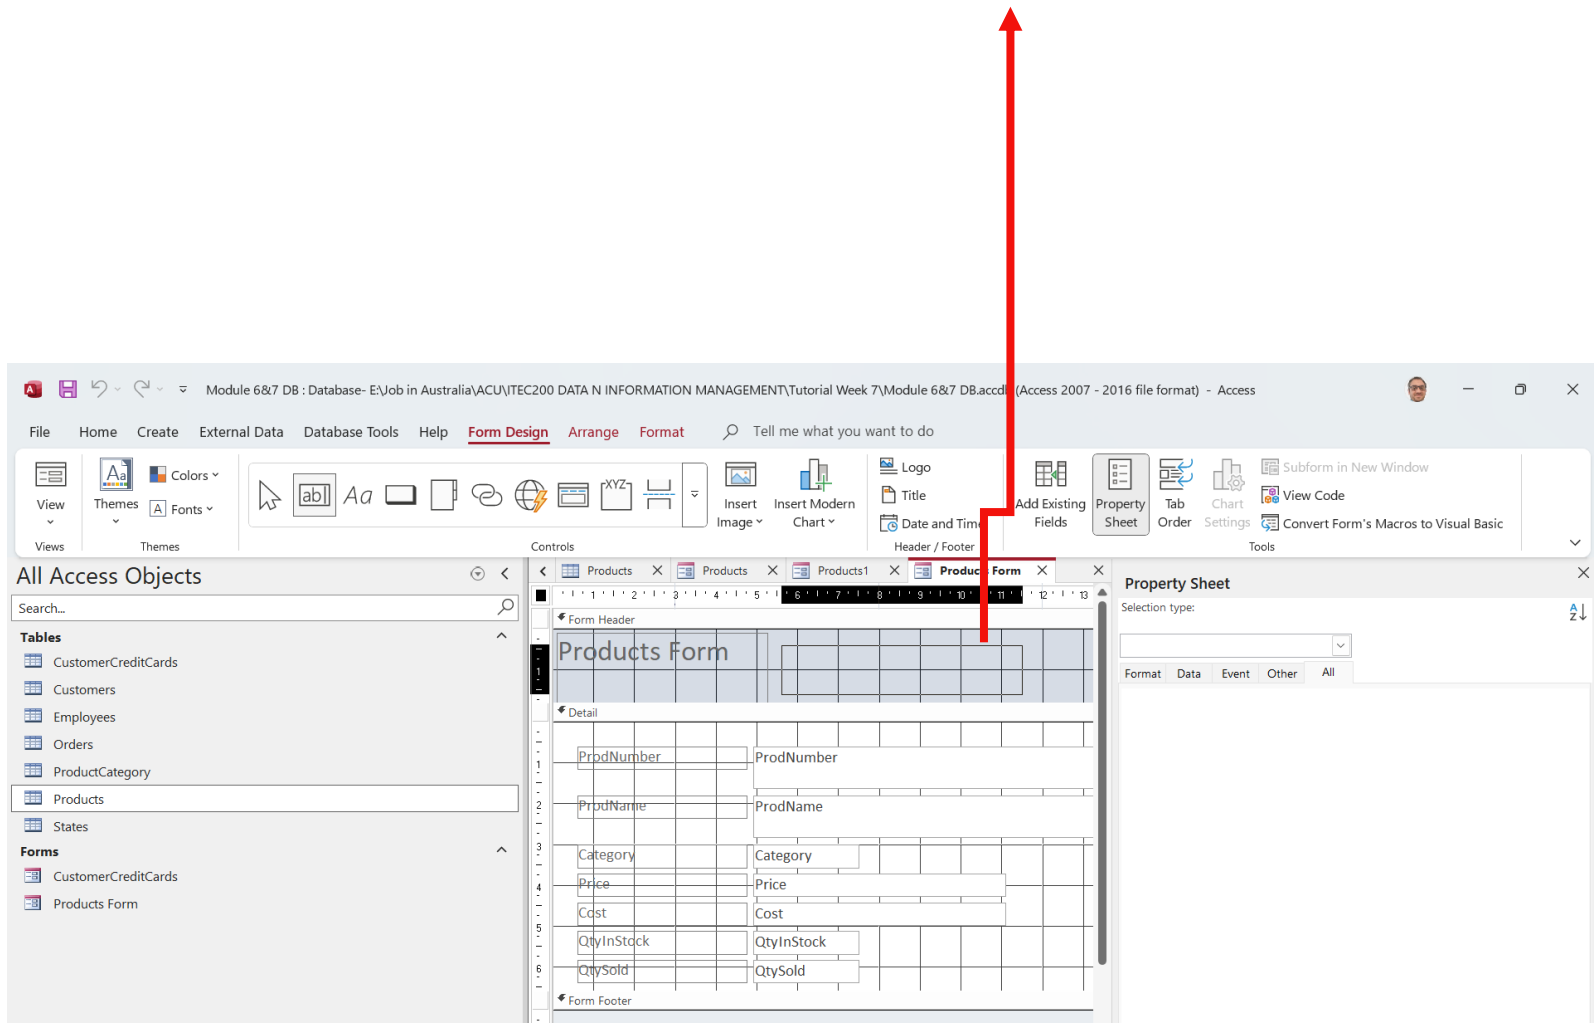

ACU
AUSTRALIAN CATHOLIC UNIVERSITY

- Switch to Design View.
- On the Design tab, click Text Box.

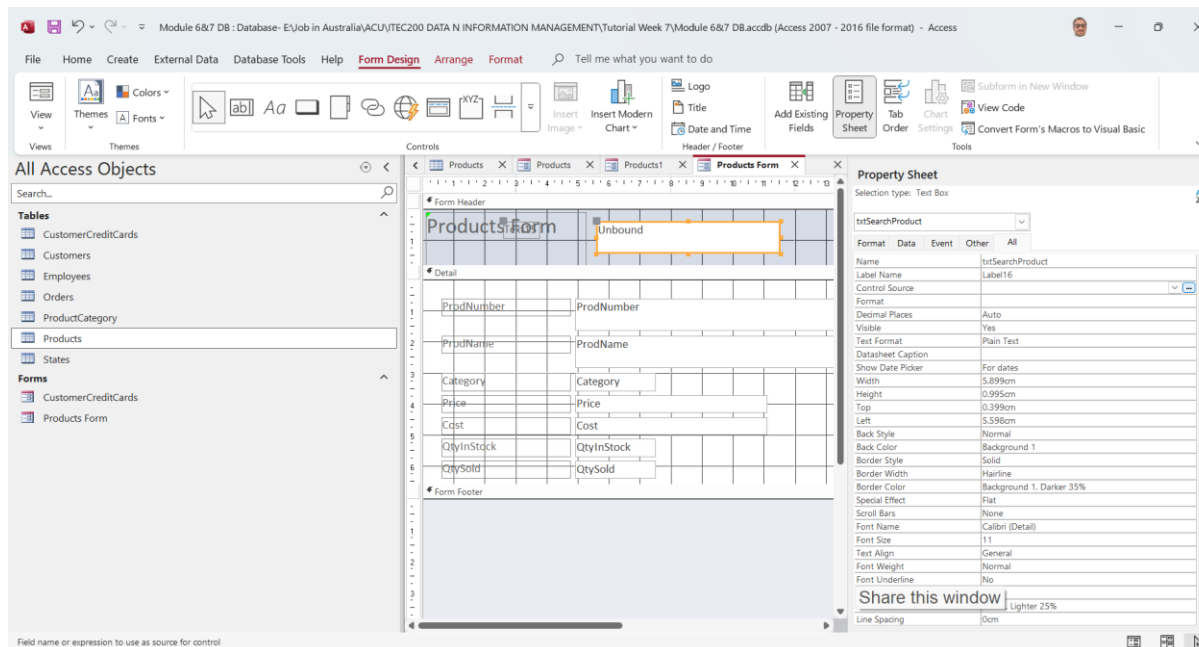

Hands-On Activity 2: Building a Products Form with Search

- Draw a box in the Form Header area.

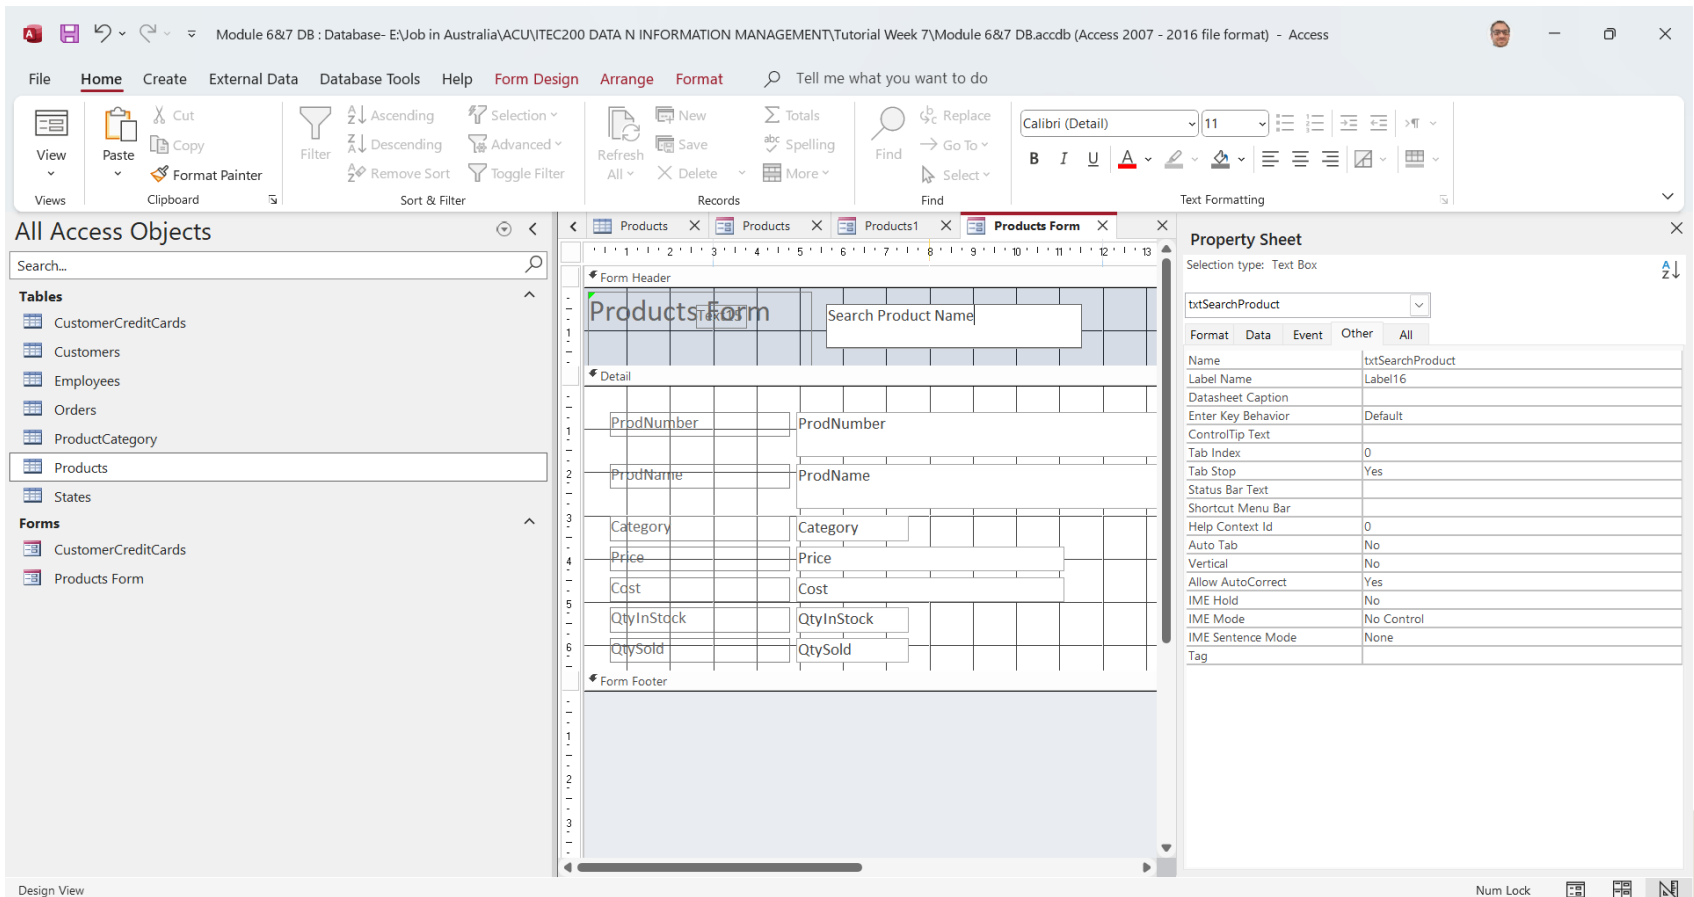

Hands-On Activity 2: Building a Products Form with Search

- Select the new text box → right-click → Properties.
- In the Other tab: set Name = txtSearchProduct.

Hands-On Activity 2: Building a Products Form with Search

- Just Type directly into text box and Replace 'Unbound' with 'Search Product Name'

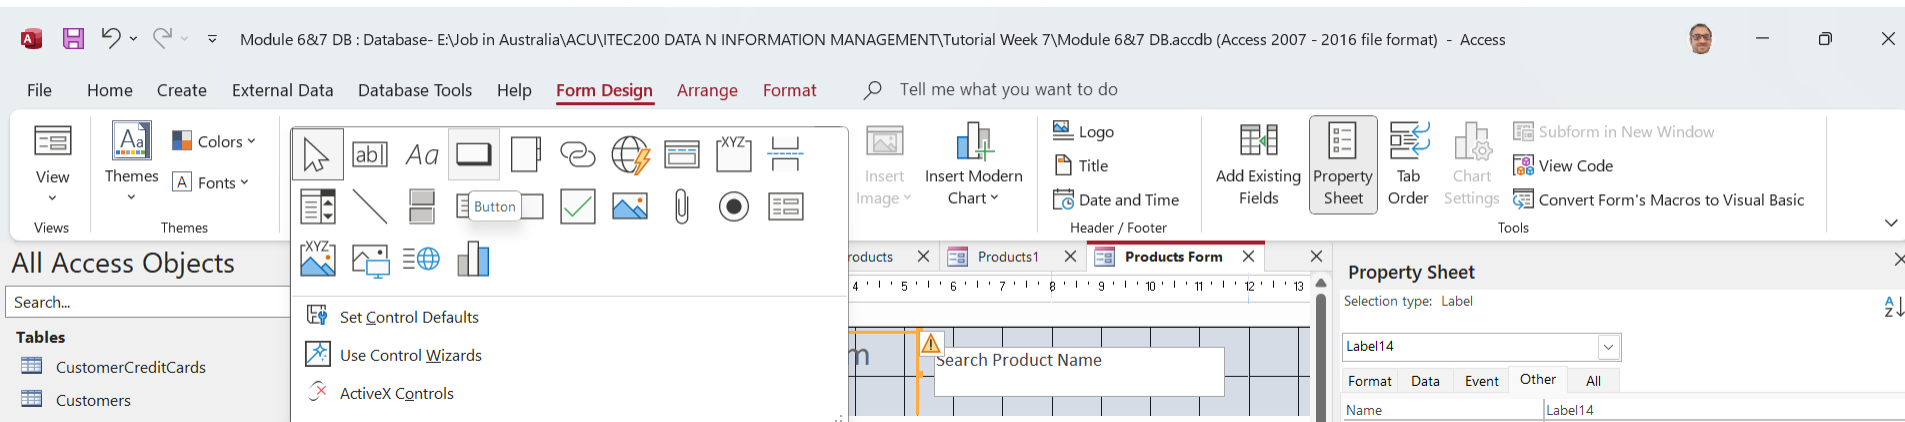

The screenshot displays the Microsoft Access application window. The title bar indicates the file is 'Module 6&7 DB: Database- E:\Job in Australia\ACU\ITEC200 DATA N INFORMATION MANAGEMENT\Tutorial Week 7\Module 6&7 DB.accdb (Access 2007 - 2016 file format) - Access'. The ribbon is set to 'Form Design', with the 'Arrange' and 'Format' tabs visible. The 'All Access Objects' task pane on the left shows a list of tables: CustomerCreditCards, Customers, Employees, Orders, ProductCategory, Products (selected), and States. Below the tables, the 'Forms' section lists CustomerCreditCards and Products Form. The main workspace shows the 'Products Form' in Design View. The form has a 'Form Header' section with a text box labeled 'Search Product Name' and a 'Detail' section with fields for ProdNumber, ProdName, Category, Price, Cost, QtyInStock, and QtySold. The 'Property Sheet' on the right shows the properties for the 'txtSearchProduct' text box, including Name, Label Name, and various formatting options.

Hands-On Activity 2: Building a Products Form with Search

Adjust the Button Properties

- Select the new button → look at the Property Sheet (on the right).
- Under Other: change Name to btnSearch.
- Under Format: change Caption to Search

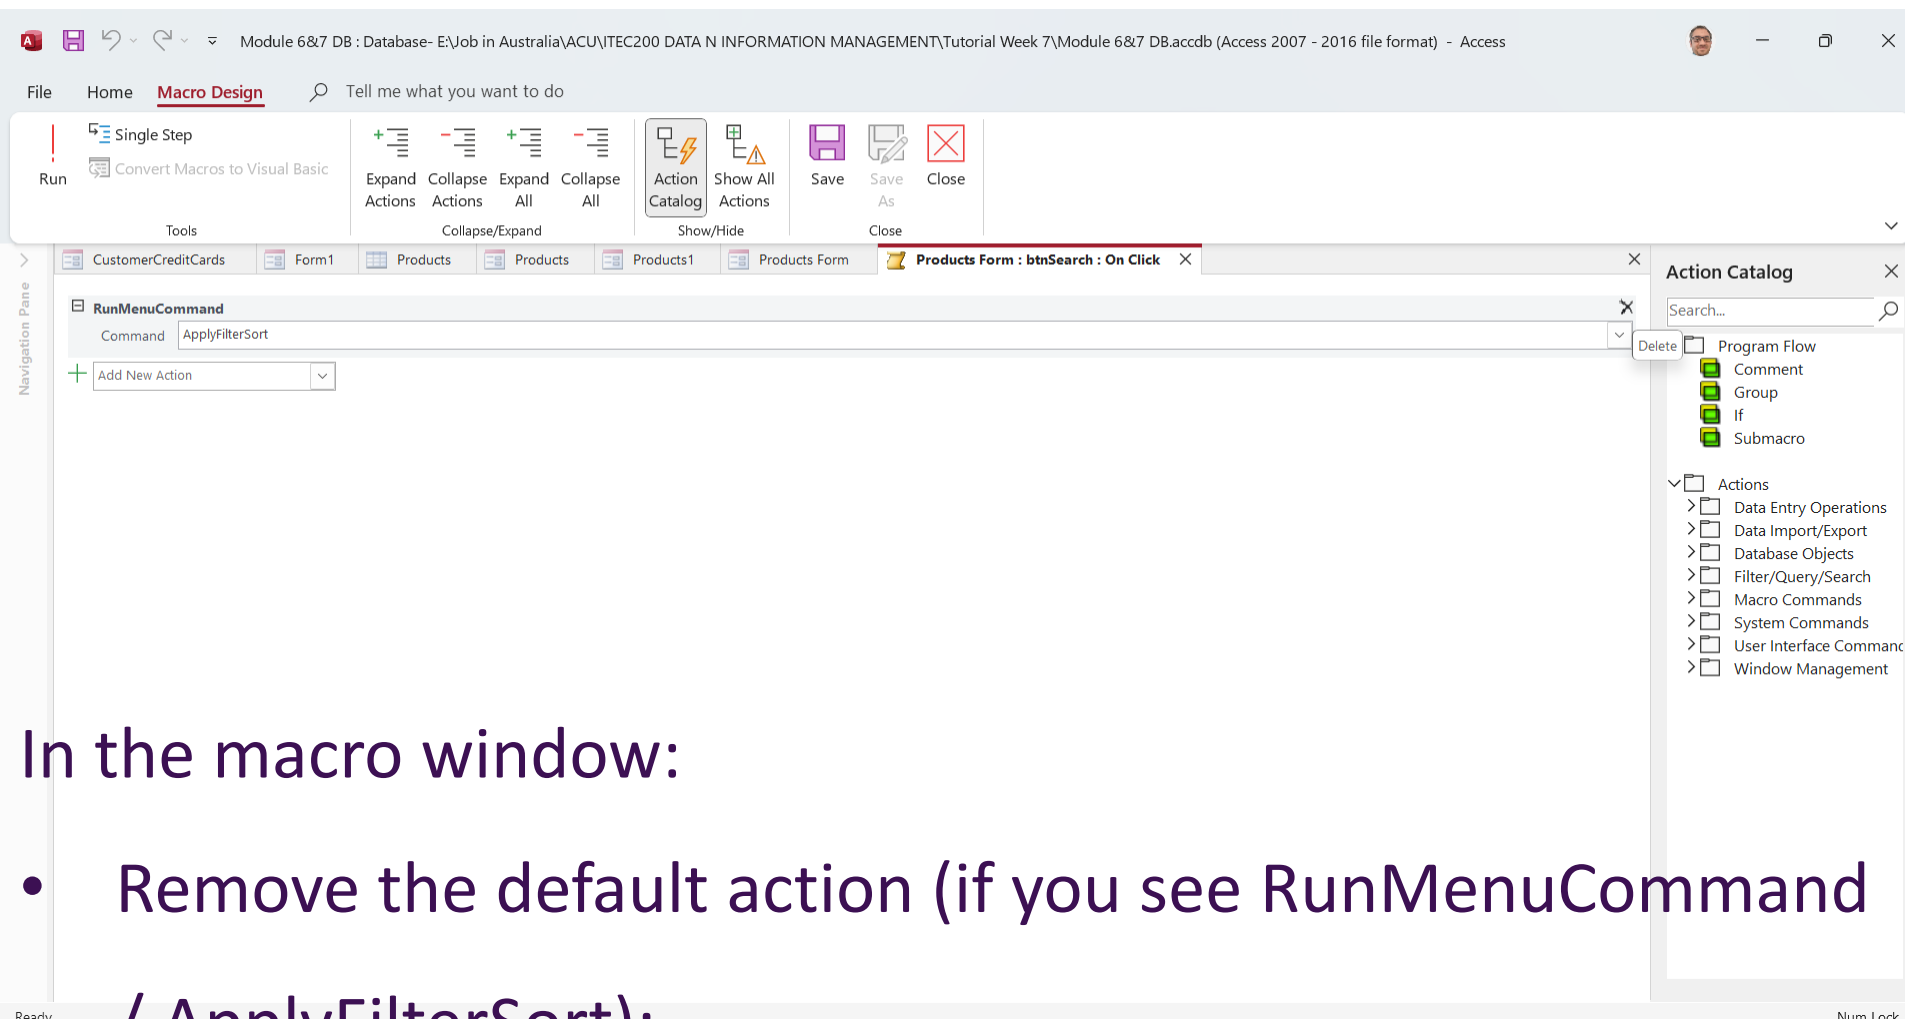

Hands-On Activity 2: Building a Products Form with Search

Wire the Filter (make it actually search)

- With the button still selected → Property Sheet → Event tab.
- In On Click, click the ... button → choose Macro Builder.

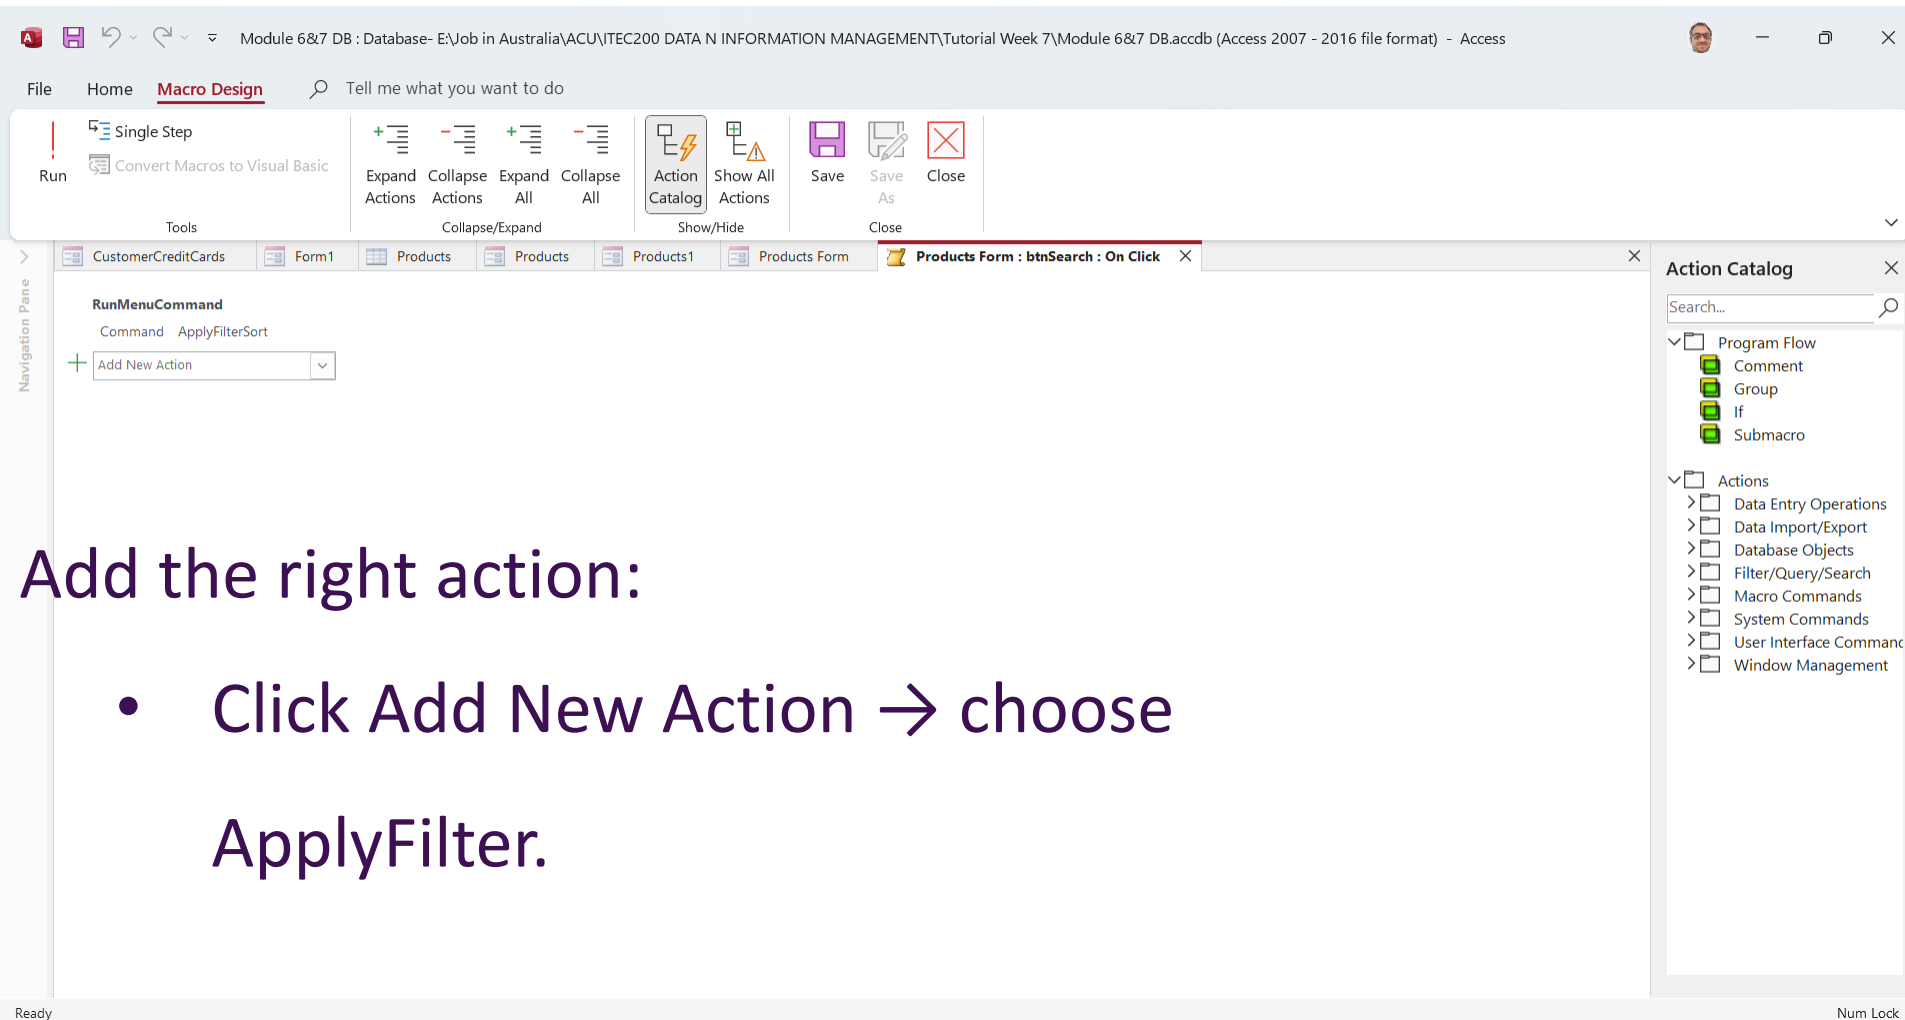

Hands-On Activity 2: Building a Products Form with Search

In the macro window:

- Remove the default action (if you see RunMenuCommand / ApplyFilterSort):
- Click the gray bar to the left of that row → press Delete.

Hands-On Activity 2: Building a Products Form with Search

The screenshot shows the Microsoft Access Macro Design view for a macro named 'Products Form : btnSearch : On Click'. The ribbon is set to 'Macro Design'. The 'RunMenuCommand' command is selected, and the 'Add New Action' dropdown is open, showing 'ApplyFilterSort'. The 'Action Catalog' pane on the right is expanded, showing the 'Program Flow' and 'Actions' categories. The 'Actions' category is expanded, showing 'Data Entry Operations', 'Data Import/Export', 'Database Objects', 'Filter/Query/Search', 'Macro Commands', 'System Commands', 'User Interface Command', and 'Window Management'. The 'Filter/Query/Search' category is expanded, showing 'Filter/Query/Search'.

Num Lock

100%

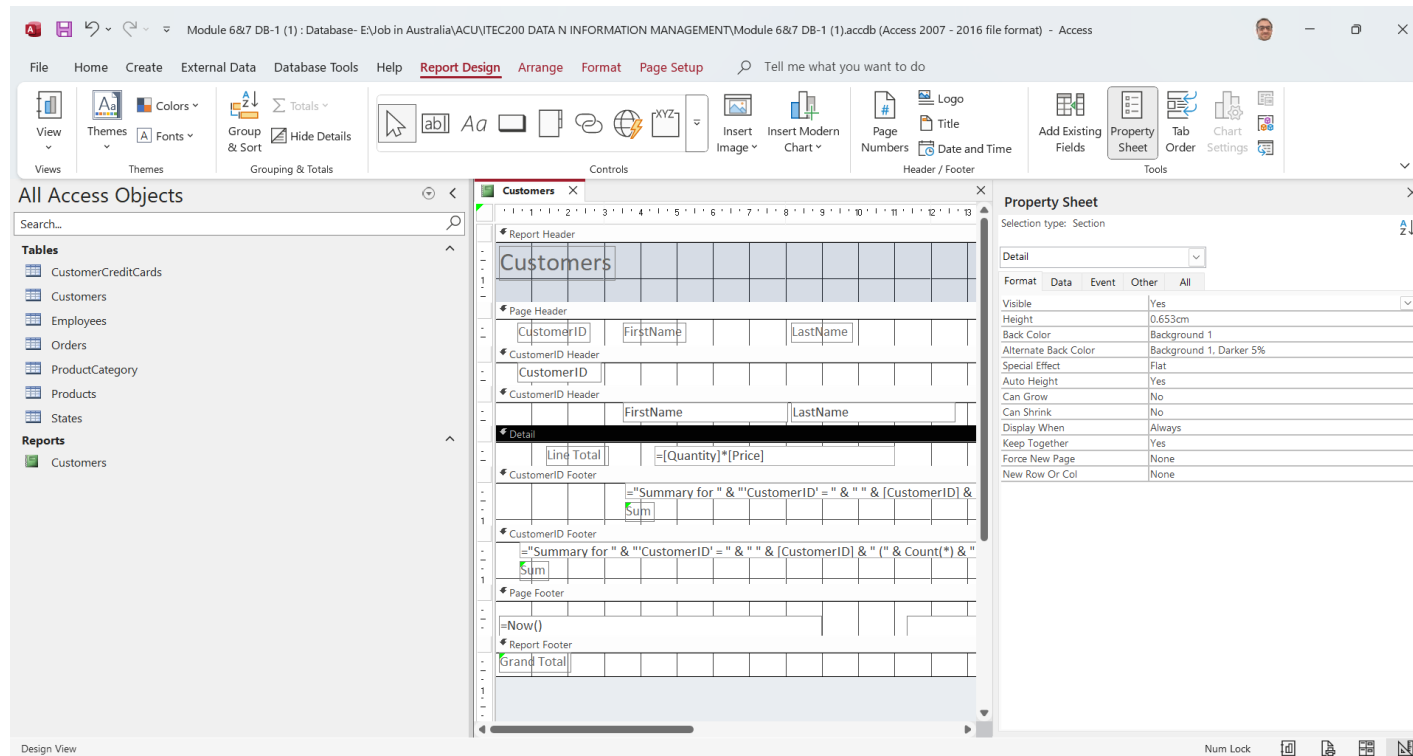

- Each Customer is listed with their Orders.
- At the bottom of each customer section, you see a Sum of Quantity (total items they ordered).
- It's basically showing:
Customer → Orders → Total per Customer.

Reports — Customers with their Orders

Add a line total (optional but nice)

- Switch to Design View.
- In the Detail section, add a Text Box to the right of Quantity.

Quantity.

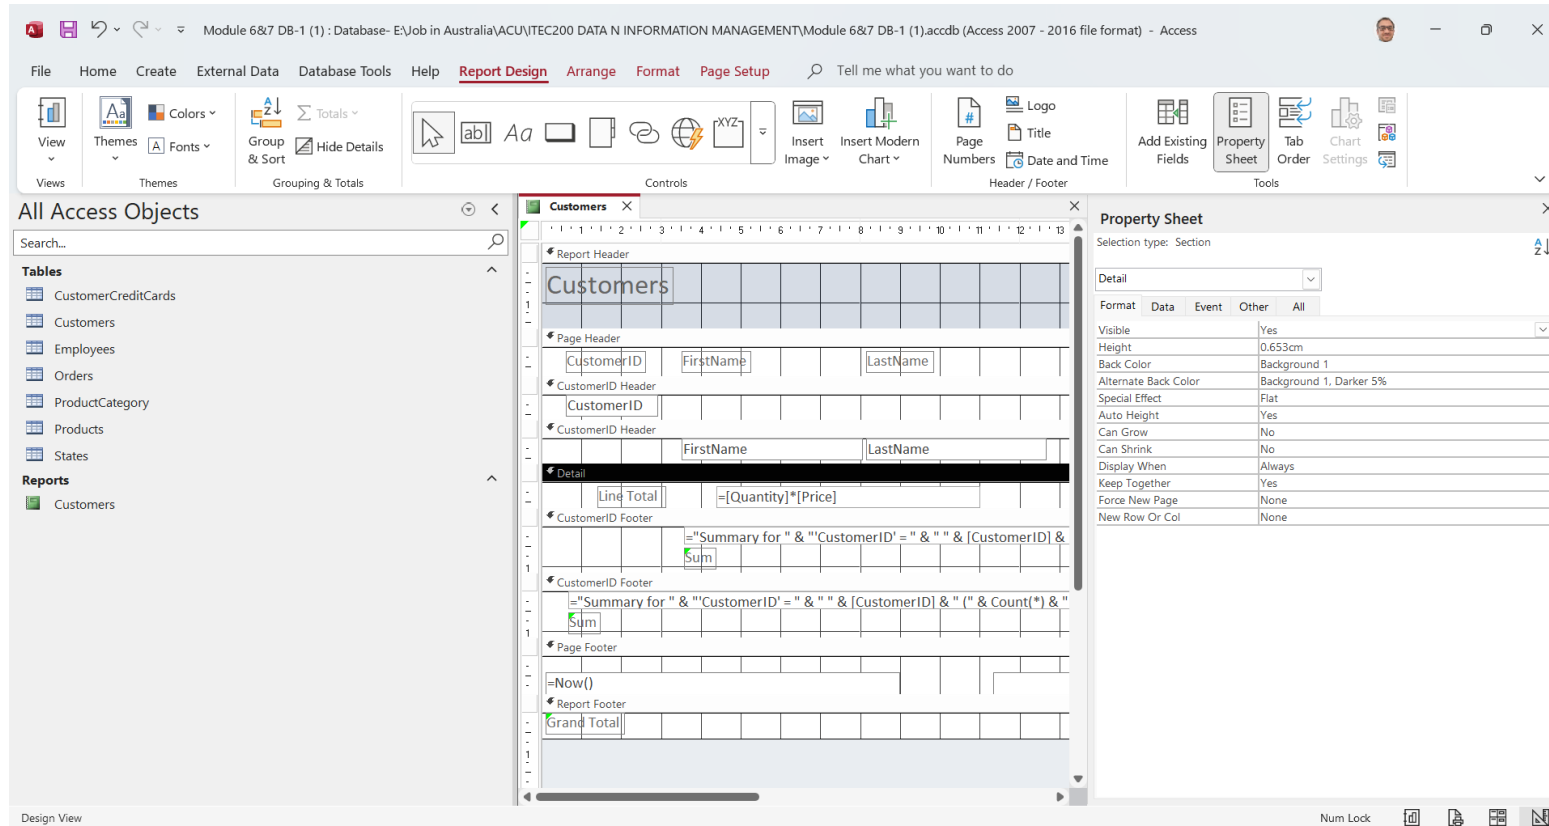

The screenshot shows the Microsoft Access application window with the 'Customers' report in Design View. The report is structured as follows:

- Report Header:** Contains the title 'Customers'.
- Page Header:** Contains fields for 'CustomerID', 'FirstName', and 'LastName'.
- CustomerID Header:** Contains the field 'CustomerID'.
- CustomerID Detail:** Contains the fields 'FirstName' and 'LastName'.
- Detail:** Contains a table with columns 'Line Total' and '=[Quantity]*[Price]'. A new text box is added to the right of the 'Quantity' field, containing the formula '=[Quantity]*[Price]'. The text box is highlighted with a green border.
- CustomerID Footer:** Contains the formula '="Summary for " & "[CustomerID]" & " & "[CustomerID]" & "Sum'.
- CustomerID Footer:** Contains the formula '="Summary for " & "[CustomerID]" & " & "[CustomerID]" & "(& Count(*)" & "Sum'.
- Page Footer:** Contains the formula '=[Now()]'.
- Report Footer:** Contains the formula 'Grand Total'.

The Property Sheet on the right shows the 'Detail' section selected, with various formatting options like 'Visible', 'Height', 'Back Color', 'Alternate Back Color', 'Special Effect', 'Auto Height', 'Can Grow', 'Can Shrink', 'Display When', 'Keep Together', 'Force New Page', and 'New Row Or Col'.

Reports — Customers with their Orders

- Set its Control Source to: $=[\text{Quantity}] * [\text{Price}]$
- Set Format = Currency.
- Change the label to Line Total.

The screenshot shows the Microsoft Access application window with the 'Customers' report in Design View. The report is structured with a header, a detail section, and a footer. The detail section contains a table with columns for CustomerID, FirstName, LastName, and a calculated field for Line Total. The Line Total field has a control source of $=[\text{Quantity}] * [\text{Price}]$ and is formatted as Currency. The footer section contains a summary for each customer, showing the sum of the Line Total field.

Property Sheet

Property	Value
Visible	Yes
Height	0.653cm
Back Color	Background 1

Reports — Customers with their Orders

Add totals per customer + grand total

- Ensure you have a Customer Footer (Report Wizard usually adds it). If not: Design → Group & Sort → add a group on customer and show Footer.

- In the Customer Footer, add a Text Box with Control Source:
$$=Sum([Quantity]*[Price])$$

Label it Customer Total,
Format = Currency.

The screenshot displays the Microsoft Access interface for a report named 'Customers'. The report is in Design View, showing a table with columns for CustomerID, FirstName, LastName, Quantity, and Price. The report is grouped by CustomerID. The footer section contains a calculated field for the sum of Quantity multiplied by Price, labeled 'Customer Total'. The Property Sheet on the right shows the report's properties, including the caption 'Customers' and the selection type 'Report'.

Design View

Let's Do Tasks 1 – 3 Together

Click on the text “frmCustomers” in the Form Header (top section).

Change its text to: **Customer Details**

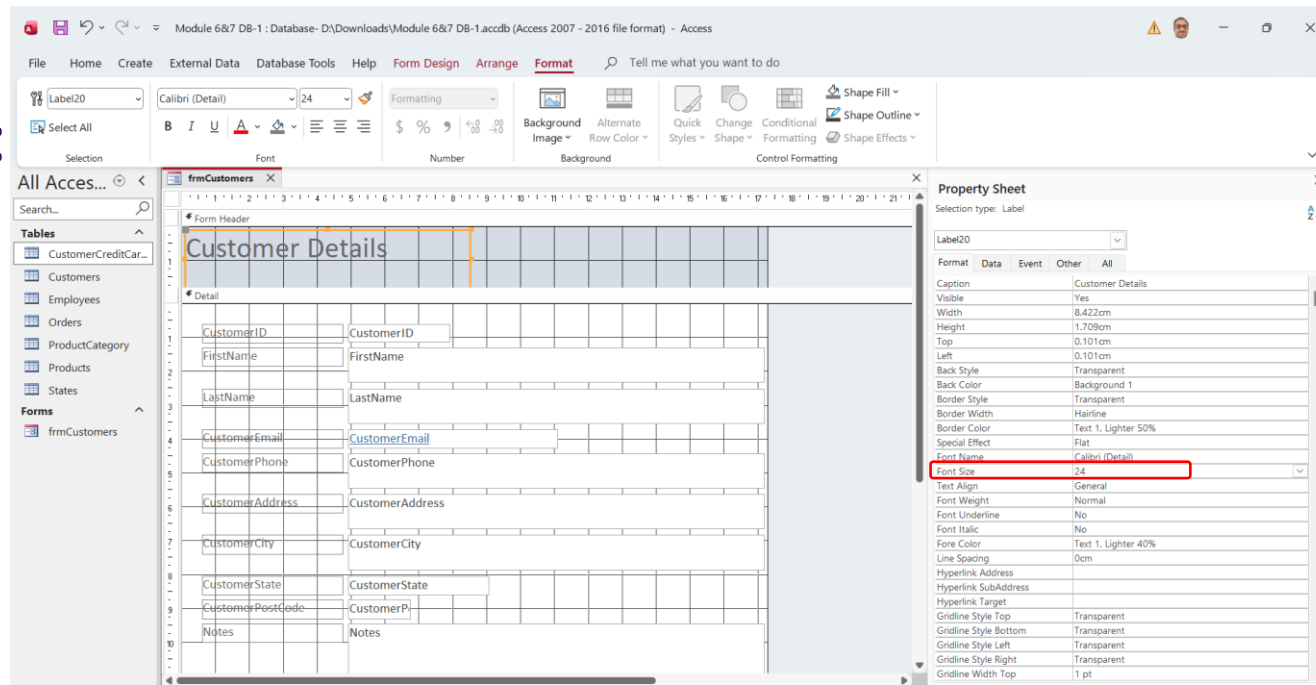

Let's Do Tasks 1 – 3 Together

Double click on Customer Details

Increase font size

Look at the top ribbon:

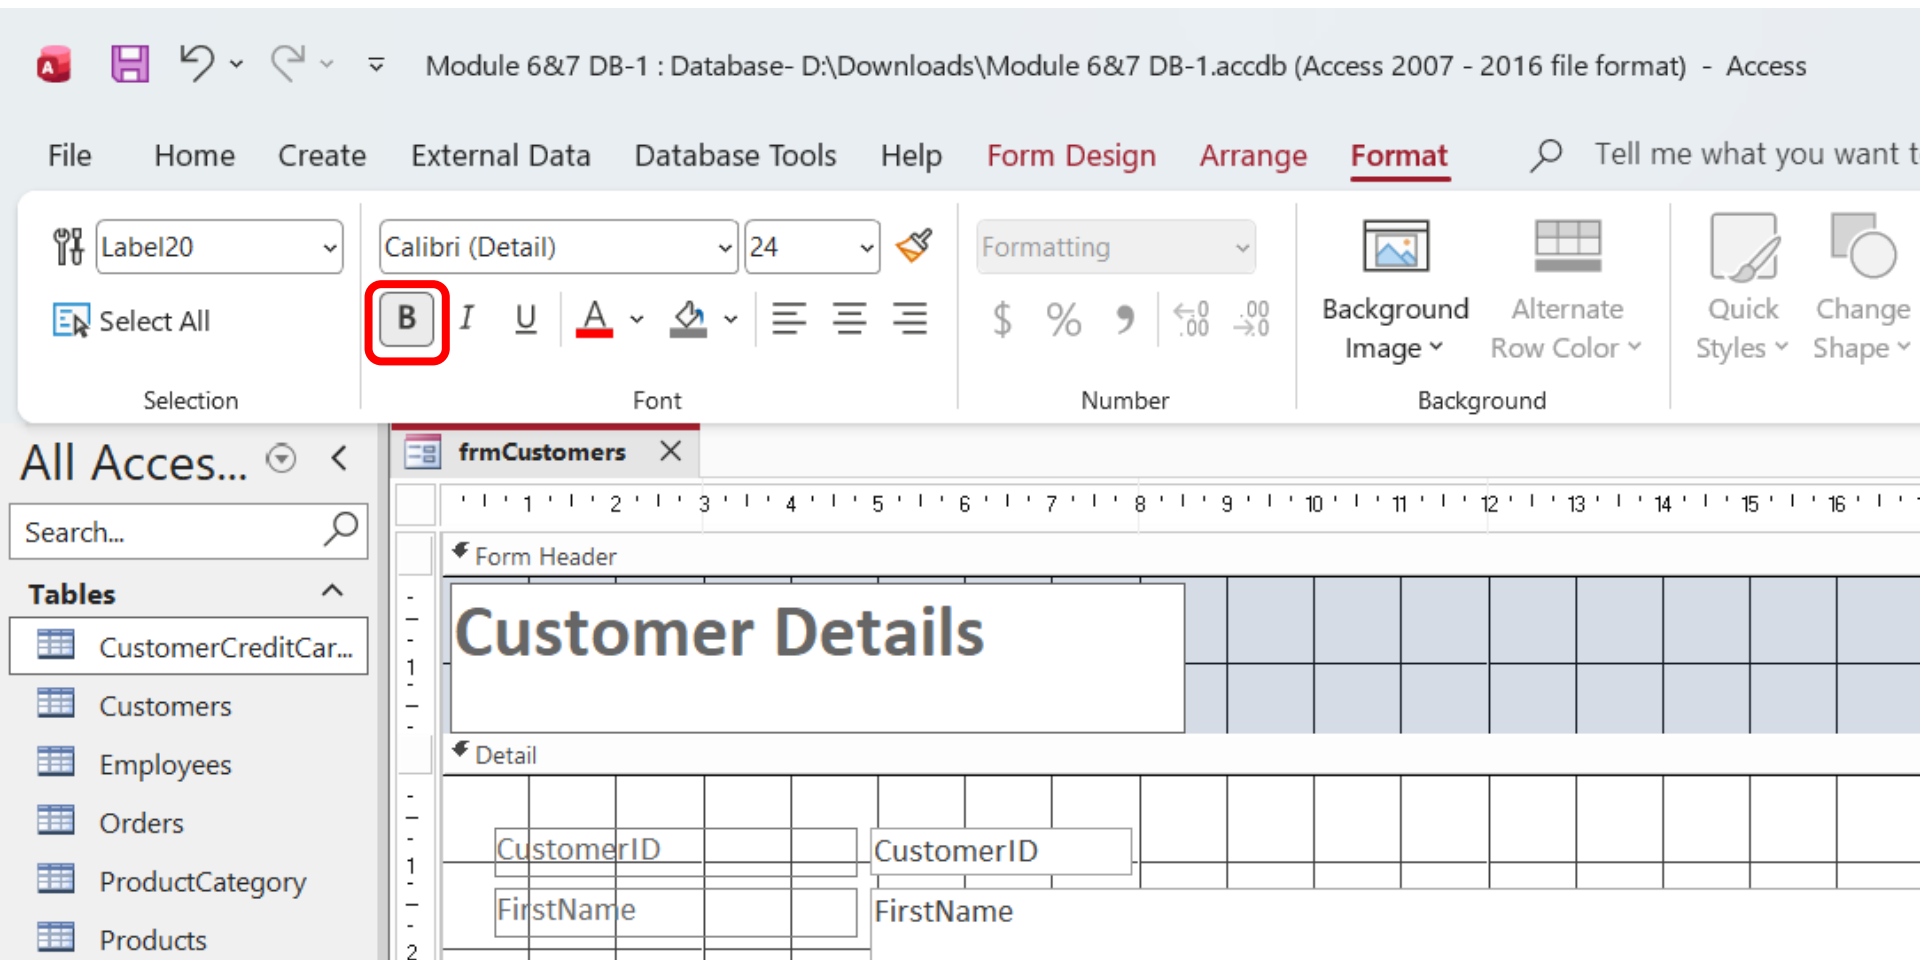

- Find the font size box (currently shows something like 20)
- Change it to:
22 or 24

Let's Do Tasks 1 – 3 Together

Make it bold

Click the B (Bold) button in the ribbon

The screenshot shows the Microsoft Access application window. The title bar indicates the file is "Module 6&7 DB-1 : Database- D:\Downloads\Module 6&7 DB-1.accdb (Access 2007 - 2016 file format) - Access". The ribbon is set to "Format". In the "Font" group, the "B" (Bold) button is highlighted with a red square. Other buttons in the Font group include "I" (Italic), "U" (Underline), "A" (Text Color), and background color options. The "Number" group shows currency, percentage, and decimal formatting. The "Background" group includes "Background Image", "Alternate Row Color", "Quick Styles", and "Change Shape".

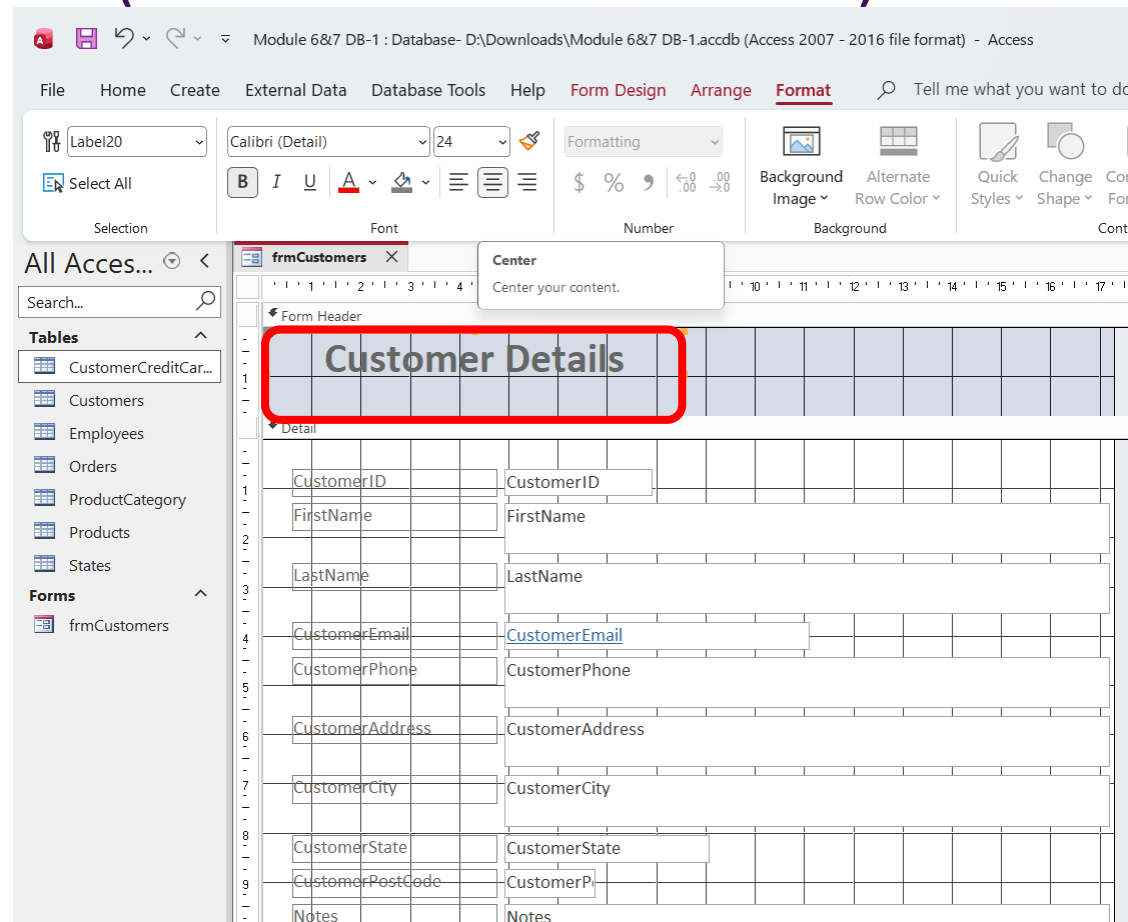

On the left, the "All Access Objects" task pane shows a list of tables: CustomerCreditCar..., Customers, Employees, Orders, ProductCategory, and Products. The main window displays a form named "frmCustomers" with a "Form Header" section containing a large text box labeled "Customer Details". Below this is a "Detail" section with a table structure showing fields like CustomerID and FirstName.

Let's Do Tasks 1 – 3 Together

4. Center the title

Still in the ribbon:

Click the Center Align button (looks like centered lines)

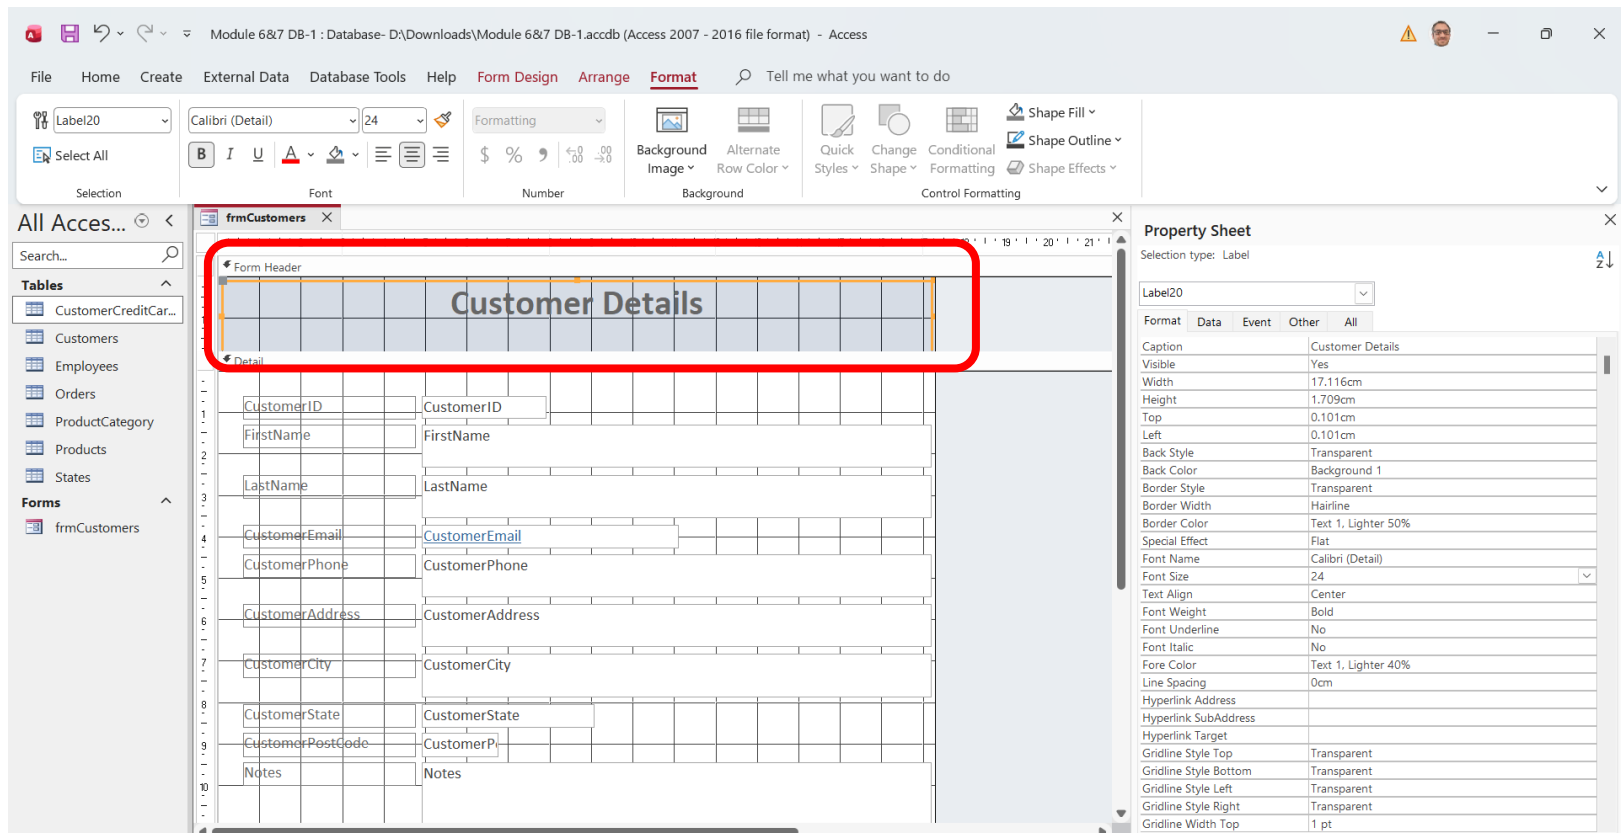

Let's Do Tasks 1 – 3 Together

Make the label box wider (very important)

Previously your text was cramped.

- Click the edges of the label box
- Drag it wider so the text has space

The screenshot shows the Microsoft Access application window with the 'frmCustomers' form in Design View. The 'Customer Details' label box is highlighted with a red rectangle. The Property Sheet on the right shows the properties for 'Label20'.

Let's Do Tasks 1 – 3 Together

Where to put it

- Inside Form Header (top grey area)
- Above or beside “Product Details”
- Not in the Detail section (where fields are)

A screenshot of the Microsoft Access application window. The title bar shows 'frmCustomers' and 'frmProducts'. The 'frmProducts' form is in design view. The left-hand pane shows the 'All Access Objects' list with 'Tables' and 'Forms' sections. The 'Forms' section lists 'frmCustomers' and 'frmProducts'. The main design area shows the form layout. The 'Form Header' section is highlighted in grey and contains a large text box labeled 'Product Details'. The 'Detail' section contains several text boxes for product information: 'ProdNumber', 'ProdName', 'Category', 'Price', 'Cost', 'QtyInStock', and 'QtySold'. The 'Form Footer' section is at the bottom. A ruler is visible at the top of the design area, showing columns 1 through 21.

Let's Do Tasks 1 – 3 Together

Step 3: Combo Box Wizard (VERY IMPORTANT)

When the wizard opens:

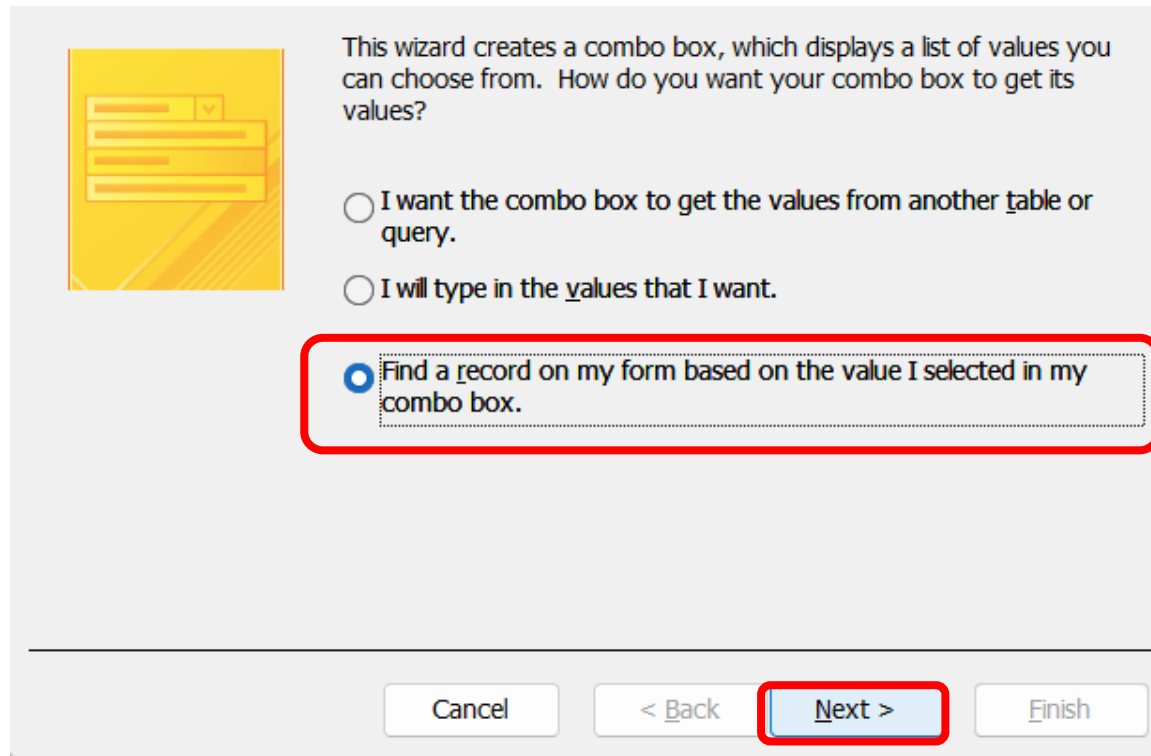

Select:

Find a record on my form based on the value I selected in my

combo box

Click Next

Combo Box Wizard

The image shows a 'Combo Box Wizard' dialog box. On the left is a yellow icon representing a form with a dropdown menu. The main text asks: 'This wizard creates a combo box, which displays a list of values you can choose from. How do you want your combo box to get its values?'. There are three radio button options. The first is 'I want the combo box to get the values from another table or query.' The second is 'I will type in the values that I want.' The third is 'Find a record on my form based on the value I selected in my combo box.' This third option is selected and highlighted with a red rectangular border. At the bottom are four buttons: 'Cancel', '< Back', 'Next >', and 'Finish'. The 'Next >' button is also highlighted with a red rectangular border.

This wizard creates a combo box, which displays a list of values you can choose from. How do you want your combo box to get its values?

☐ I want the combo box to get the values from another table or query.

☐ I will type in the values that I want.

☒ Find a record on my form based on the value I selected in my combo box.

Cancel < Back **Next >** Finish

Let's Do Tasks 1 – 3 Together

Do NOT choose:

“I want the combo box to look up values in a table...”

“I will type in the values...”

Those options will create a dropdown, but it won't move the form (this is the mistake many students make — like David earlier).

Combo Box Wizard

This wizard creates a combo box, which displays a list of values you can choose from. How do you want your combo box to get its values?

- ☐ I want the combo box to get the values from another table or query.
- ☐ I will type in the values that I want.
- ☒ Find a record on my form based on the value I selected in my combo box.

Cancel

< Back

Finish

Let's Do Tasks 1 – 3 Together

1. Select Products table
2. Move:

ProdName → to Selected

Fields
3. Click Next

Combo Box Wizard

Which fields of Products contain the values you want included in your combo box? The fields you select become columns in your combo box.

Available Fields:

ProdNumber
Category
Price
Cost
QtyInStock
QtySold

Selected Fields:

ProdName

Navigation buttons: >, >>, <, <<, Cancel, < Back, Next >, Finish

Let's Do Tasks 1 – 3 Together

Change ProdName1

(not good)

Change it to:

Search Product

Name

Then click:

Finish

Combo Box Wizard

What label would you like for your combo box?

Search Product Name

Those are all the answers the wizard needs to create your combo box.

Cancel < Back Next > Finish

Let's Do Tasks 1 – 3 Together

Why change it?

“ProdName1” =
system name (not
user-friendly)

“Search Product
Name” = clear for
users

Combo Box Wizard

What label would you like for your combo box?

Search Product Name

Those are all the answers the wizard needs to create your combo box.

Cancel < Back Next > Finish

Let's Do Tasks 1 – 3 Together

Place it Properly

After clicking Finish

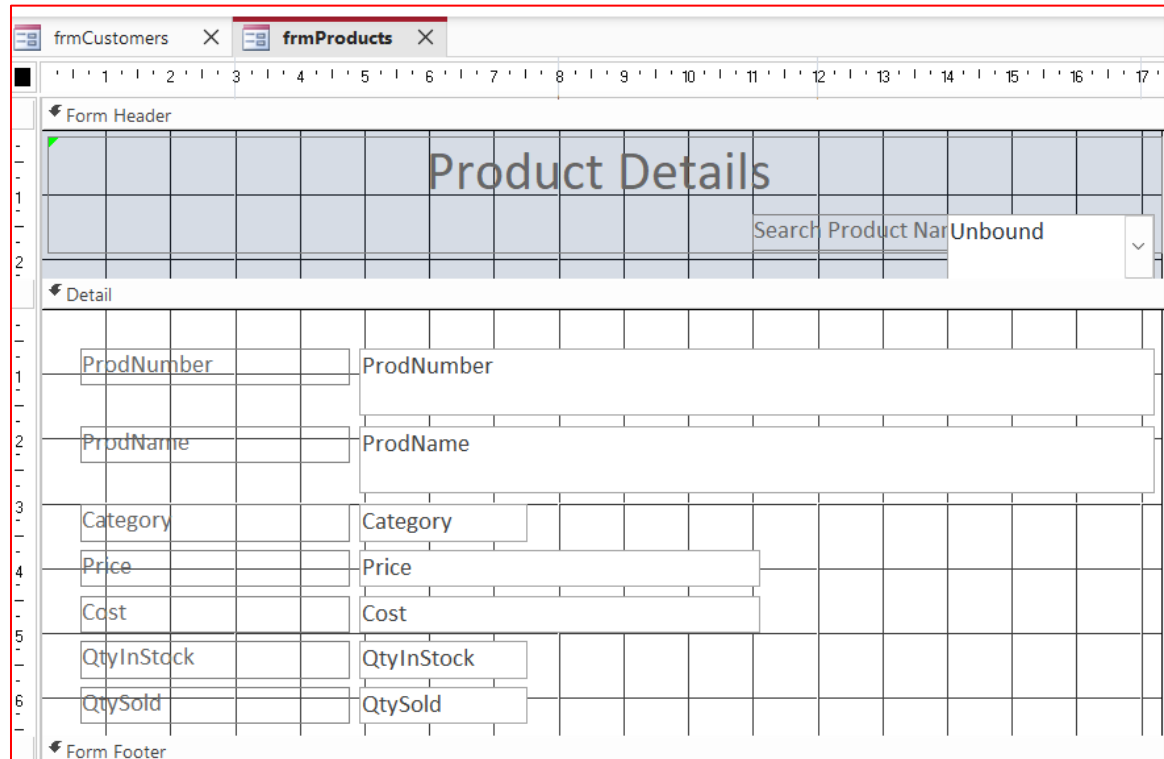

Press Ctrl + S

Switch to Form View

Try this:

Select: DTD-7000 Drone

The form should jump
to that product

The screenshot displays the Microsoft Access interface with two form windows open: 'frmCustomers' and 'frmProducts'. The 'frmProducts' window is active and shows a form in Form View. The form is divided into two main sections: 'Form Header' and 'Form Footer'. The 'Form Header' section contains a large text box labeled 'Product Details' and a search box labeled 'Search Product Name' with a dropdown menu set to 'Unbound'. The 'Form Footer' section is currently empty. The 'Detail' section of the form contains seven fields, each with a label and a corresponding text box: 'ProdNumber', 'ProdName', 'Category', 'Price', 'Cost', 'QtyInStock', and 'QtySold'. The fields are arranged in two columns, with 'ProdNumber' and 'ProdName' in the first column, and 'Category', 'Price', 'Cost', 'QtyInStock', and 'QtySold' in the second column. The form is set against a light blue grid background.

Let's Do Tasks 1 – 3 Together

Place it Properly

After clicking Finish

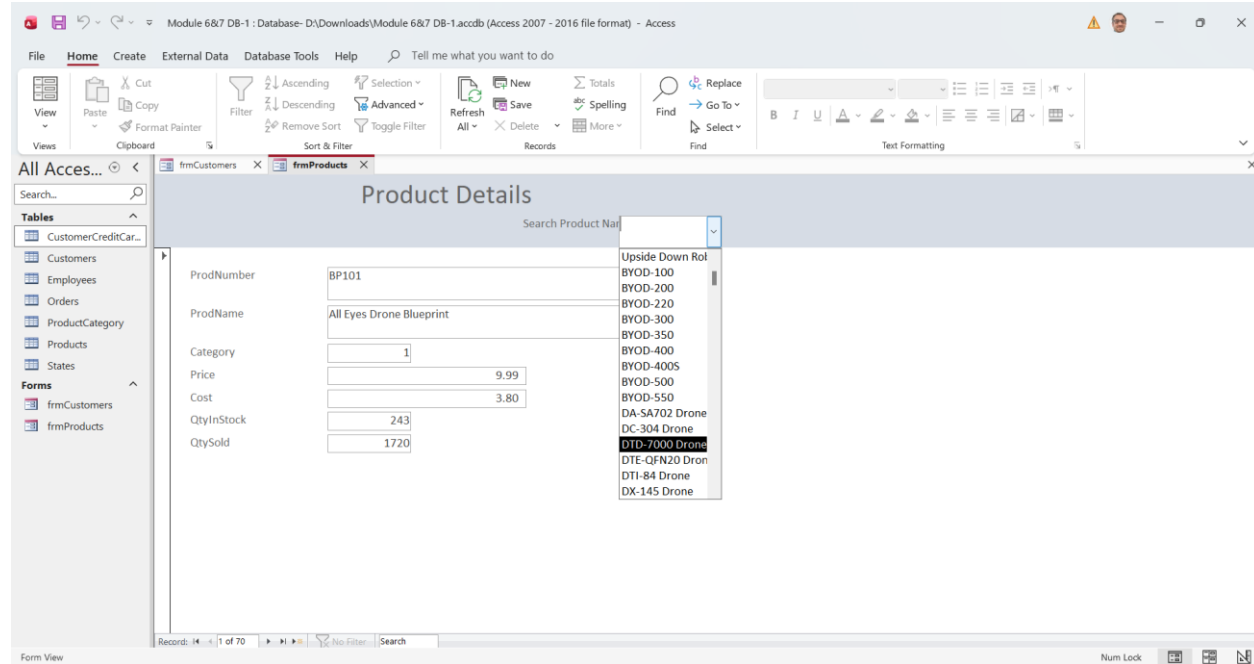

Press Ctrl + S

Switch to Form View

Try this:

Select: DTD-7000 Drone

The form should jump

Let's Do Tasks 1 – 3 Together

If it does NOT move

Then:

- Delete combo box
- Redo it and make sure you selected:

Find a record on my form based on the value I selected

Let's Do Tasks 1 – 3 Together

Why this matters

- Without search → user scrolls through many records
- With combo box → instant navigation

This is exactly what Task 2 is testing

Let's Do Tasks 1 – 3 Together

Final checklist for Task 2

- ✓ Combo box in header
- ✓ Label = Search Product Name
- ✓ Dropdown shows product names
- ✓ Selecting item → form moves

Let's Do Tasks 1 – 3 Together

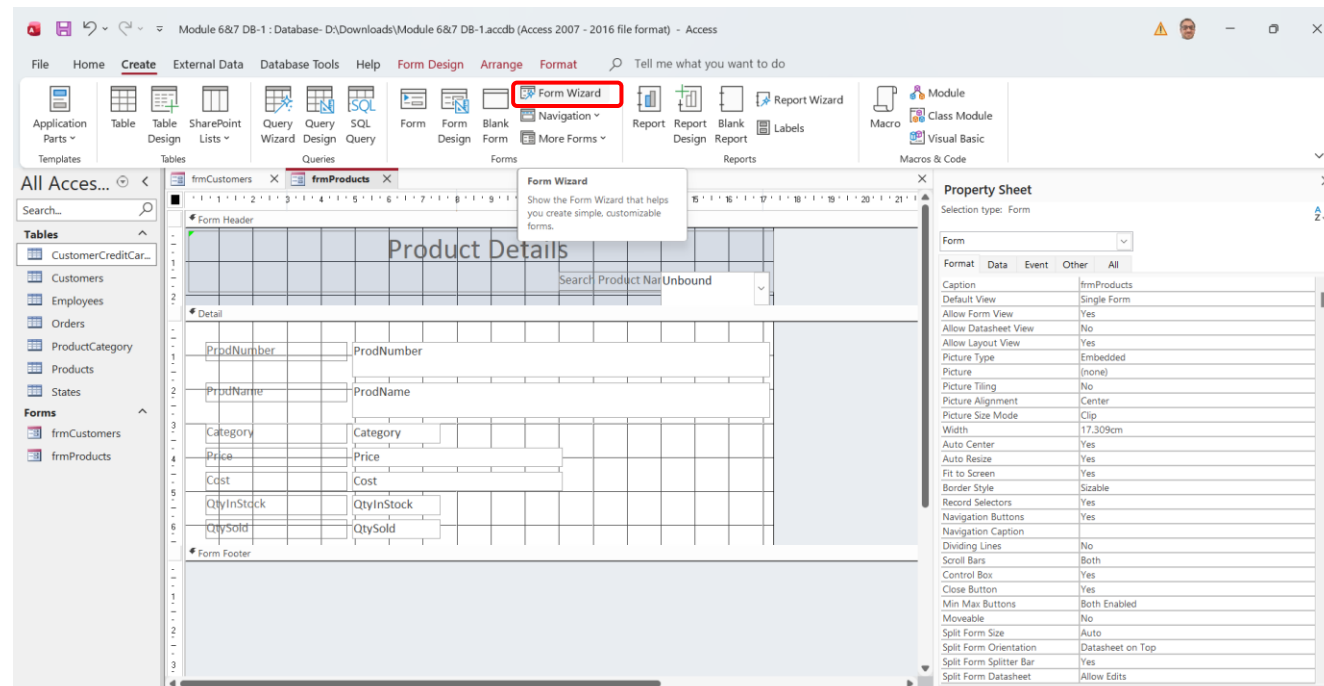

Task 3: . Save Task 2 first

Press Ctrl + S to save frmProducts.

2. Start the Employee form

Click the Create tab at the top.

Click Form Wizard.

Let's Do Tasks 1 – 3 Together

In Tables/Queries, choose Table: Employees.

Click >> to add all fields.

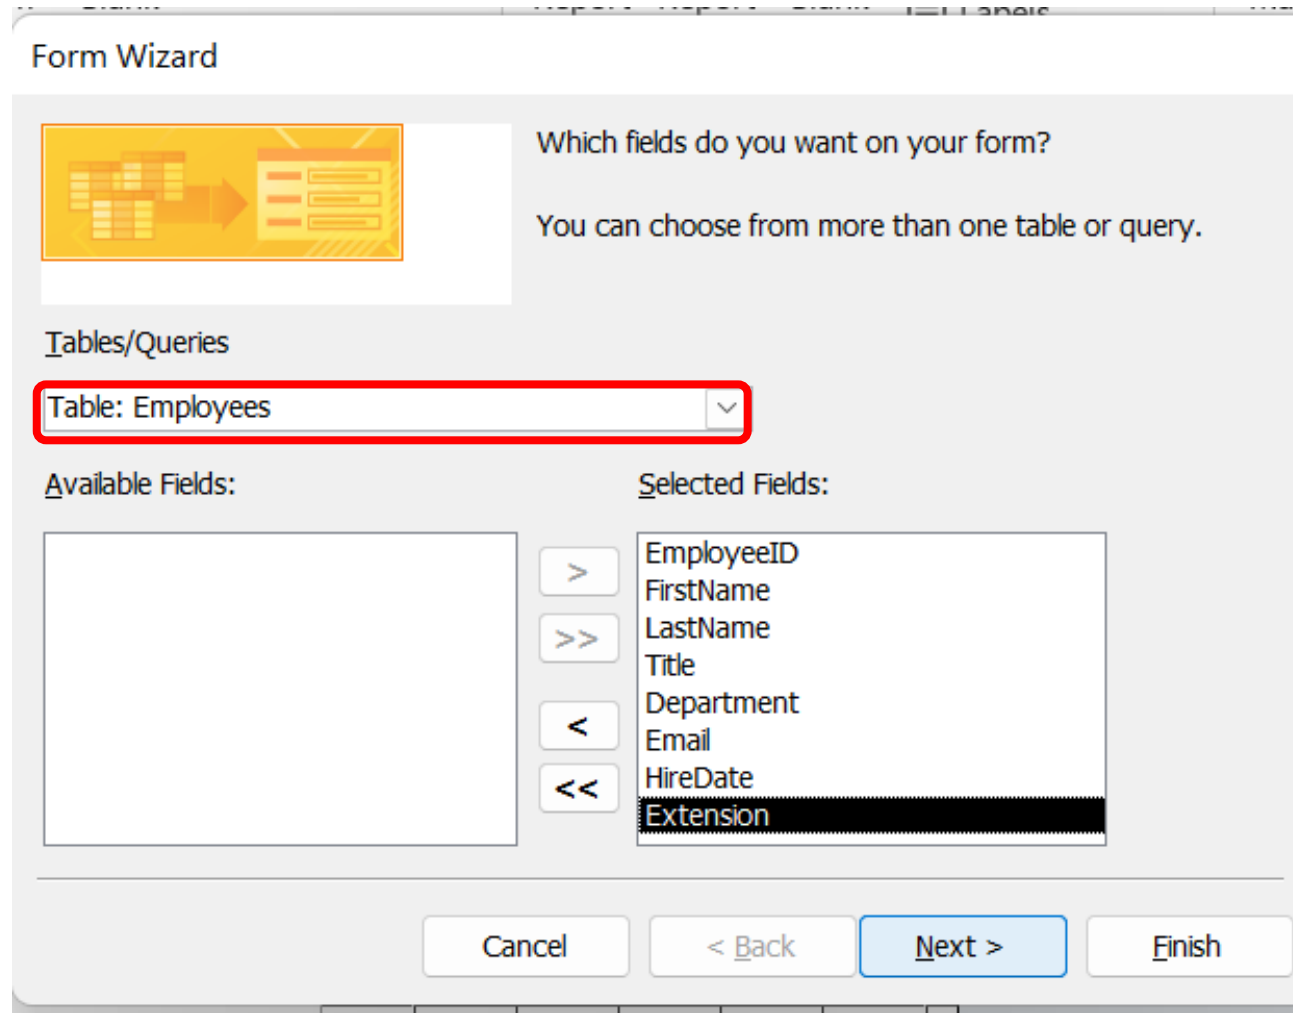

Click Next.

Choose Columnar.

Click Next.

Name the form:

frmEmployees

The screenshot shows the 'Form Wizard' dialog box in Microsoft Access. The title bar reads 'Form Wizard'. The main text asks 'Which fields do you want on your form?' and 'You can choose from more than one table or query.' Below this, there is a section for 'Tables/Queries' with a dropdown menu showing 'Table: Employees', which is highlighted with a red rectangle. To the right of the dropdown are navigation buttons: '>', '>>', '<', and '<<'. Below the 'Tables/Queries' section is a list of 'Available Fields' (currently empty) and a list of 'Selected Fields'. The 'Selected Fields' list contains: EmployeeID, FirstName, LastName, Title, Department, Email, HireDate, and Extension (which is highlighted). At the bottom of the dialog are four buttons: 'Cancel', '< Back', 'Next >', and 'Finish'.

Form Wizard

Which fields do you want on your form?

You can choose from more than one table or query.

EmployeeID	EmployeeID						
FirstName	FirstName						
LastName	LastName						
Title	Title						
Department	Department						
Email	Email						
Extension	Extension						
HireDate	HireDate						

Let's Do Tasks 1 – 3 Together

This layout is better because:

- name fields are near the top
- job information is together
- contact information is together
- hire date is separate and easy to find

Module 6&7 DB-1 : Database- D:\Downloads\Module 6&7 DB-1.accdb (Access 2007 - 2016 file format) - Access

Form View

What to Submit

- Completed Access database with forms & reports.
- Screenshots of each form & report.
- Main Menu form with student name & ID.

What to Avoid

- X Submitting tables only (no forms/reports).
- X Leaving default layouts (ugly/unprofessional).
- X Missing student name/ID in the Main Menu form.

Submission of Tutorials & Assessments

- These guidelines are designed to support your learning and help you apply necessary techniques effectively. Please do the remaining parts/questions and follow the instructions based on Canvas. If you have any questions, feel free to ask—I'm happy to help!

Let's Answer Your Questions

1. **Live during class** – Ask directly during sessions.
2. **Canvas Inbox** – For structured academic queries.
3. **Email** – For formal communications or attachments.
4. **Microsoft Team** – Send a reminder if I did not reply after 3 business day

Dear Farshid,

Hope all is well,

I have submitted a first attempt of the week 7 tutorial.

However, while doing this, I encountered some problems with Microsoft Access that I was hoping you could help with, if possible.

For question 2, it asks to add a combo box to the page. I have done so, however I can't seem to make it connect to the form. It displays the options for the products, but when one is selected I can't seem to get it to display the correct entry. In the pictures below you can see that I have selected a drone from the combo box, but the form still displays the blueprints entry. How can I fix this?

In question 4, it asks us to add a search bar for the FirstName cell. While I have added a search button that displays the UI asking for a parameter, I would like to add an actual search bar that works and is connected to the form. All previous attempts of mine to accomplish this have failed, either having the search bar not be connected to the form like in the previous problem I encountered, or accidentally having the search bar become a data entry field. And this is the type of search bar the question asks for:

Student Questions and Answers

I would be incredibly grateful for any assistance.

Kind regards,

Student Questions and Answers

Dear David,

Hope you are doing well, and thanks for the detailed screenshots — they really help.

You're actually very close, and the issues you're facing are quite common in Access.

Question 2 (Combo Box issue)

Right now, your combo box is showing product names, but it is not moving the form to the selected record. This usually happens when the combo box is created as a simple dropdown rather than a “find record” control.

Student Questions and Answers

The easiest fix is:

1. Open the Products form in Design View
2. Delete the current combo box
3. Add a new one using Combo Box Wizard
4. Choose:
“Find a record on my form based on the value I selected in my combo box”
5. Select Products table → ProdName
6. Finish and test in Form View

Student Questions and Answers

After this, when you select a product (e.g. a drone), the form should jump to that record.

Question 4 (Search bar issue)

The popup “Enter Parameter Value: SearchName” means

Access is looking for something called *SearchName* but cannot find it — usually due to a missing or incorrectly named control.

Instead of using a parameter, create a proper search combo box:

Student Questions and Answers

1. Open Customer Orders form in Design View
 2. Add a Combo Box in the header
 3. Choose:
“Find a record on my form based on the value I selected”
 4. Select Customers table → FirstName
(you can also include LastName if you like)
 5. Finish and rename it to something like Search Customer
- This will let you select a name and jump directly to that customer.

Small extra note

The ##### in your Date field is not an error — it just means the column is too narrow. Expanding the field will fix it.

Overall, you're on the right track — just make sure to use the correct combo box option when creating search controls.

Let me know if anything still doesn't work after trying this.

Student Questions and Answers

Dear Farshid, may I ask about how to insert a header or footer in MS access design view for a report.

Kind Regards,

Student Questions and Answers

Hi Student,

For your report, here's how you can add headers and footers:

Open the report in Design View, then right-click anywhere in the blank grey area and tick:

- Report Header/Footer
- Page Header/Footer

Once they appear, you can use them like this:

- Report Header → appears once at the start (good for your title)

Student Questions and Answers

- Page Header → appears on every page (good for column headings)
- Report Footer → appears once at the end (good for totals)
- Page Footer → appears at the bottom of each page (good for page numbers)

After that, you can drag labels, text boxes, or even a logo into those sections.

Student Questions and Answers

Give it a try and see how it goes. If anything doesn't work as expected, feel free to send a screenshot and I'll help you sort it out.

Kind regards,

Dr. Farshid Keivanian
