

# Explore Azure Storage for non- relational data

**Week 10**

**Dr. Farshid Keivanian**

# Explore Azure Storage for Non-Relational Data

What are we learning this week?

This week we will learn how Microsoft Azure stores and manages non-relational (NoSQL) data using different Azure Storage services.

# Explore Azure Storage for Non-Relational Data

We will practise:

- Creating and configuring an Azure Storage Account
- Working with Blob Storage
- Exploring Azure Files
- Using Azure Tables
- Understanding Azure Cosmos DB
- Uploading and managing files in the cloud
- Understanding how companies store large amounts of data securely and efficiently

# Explore Azure Storage for Non-Relational Data

## Why is this important?

Modern organisations generate huge amounts of data every day:

- Images
- Videos
- Customer records
- Logs
- IoT/sensor data
- Backups
- Application data

Traditional databases are not always suitable for this type of data.

Azure Storage provides scalable, secure, and cost-effective cloud storage

# Explore Azure Storage for Non-Relational Data

## Roadmap

### 1. Explore Azure Storage

Learn how Azure Storage Accounts work and how cloud storage is organised.

### 2. Explore Azure Blob Storage

Upload and manage files such as JSON documents, images, and videos.

### 3. Explore Azure Files

Create shared cloud folders that can be accessed like normal computer drives.

### 4. Explore Azure Tables

Store flexible NoSQL data using key-value structures.

### 5. Explore Azure Cosmos DB

Understand globally distributed modern databases for high-speed applications.

# Explore Azure Storage for Non-Relational Data

## Skills We Practise This Week

- Cloud Computing
- Microsoft Azure Fundamentals
- Data Storage Management
- NoSQL Database Concepts
- File Sharing in the Cloud
- Blob & Object Storage
- Basic Cloud Security
- Resource Management

# Explore Azure Storage for Non-Relational Data

**Where are these skills used in industry?**

## **Australian Companies & Organisations Using Azure**

Many organisations in Australia use Microsoft Azure, including:

- Commonwealth Bank
- Telstra
- Woolworths
- NAB
- ANZ
- Government agencies
- Universities
- Healthcare systems
- Startups and IT companies

# Explore Azure Storage for Non-Relational Data

## Real Industry Examples

### Banking

Banks store transaction logs and customer documents securely in cloud storage.

### Retail

Retail companies store product images, inventory data, and customer analytics.

### Healthcare

Hospitals store medical records and imaging data securely in cloud systems.

### Education

Universities use Azure for student systems, online learning platforms, and research data.

### IoT & Smart Cities

Sensor data from traffic systems and smart devices is stored using NoSQL and cloud storage solutions.

# Explore Azure Storage for Non-Relational Data

## Knowledge to Share

## Blob Storage vs Traditional Files

Blob Storage is designed for:

- Large-scale storage
- Internet-based access
- High availability
- Scalability

Unlike local hard drives, Azure can store petabytes of data globally.

# Explore Azure Storage for Non-Relational Data

## Why NoSQL?

NoSQL databases are useful because they:

- Handle large amounts of unstructured data
- Scale easily
- Work faster for web/mobile/cloud apps
- Support flexible data structures

# Explore Azure Storage for Non-Relational Data

## Career Relevance

These skills are valuable for:

- Cloud Engineers
- Data Engineers
- IT Support Specialists
- Cybersecurity Professionals
- Software Developers
- DevOps Engineers
- Database Administrators

Azure skills are highly demanded in Australia and globally.

IgniteAI Search 🔍

- Sign in using the credentials you created in the Week 8 tutorial.
- Scroll down to the "[Explore Azure Storage for non-relational data](#)" lab. Then, click on the 'Launch' button.

 [Explore Azure Storage for non-relational data](#) (Expected Duration 2 hours, 15 minutes)  
DP-900T00-A: Introduction to Microsoft Azure Data [Cloud Slice Provided], Learning Path 03 (CSS)  
[Launch](#)  
10 of 10 launch attempts remaining

- The Virtual Lab will begin loading in a new window. This will take 1-2 minutes.
- Log in to the virtual lab using the username/password provided in the right-hand side window.
- Complete the following tasks, take a screenshot at the final stage of each task for submission:
  - [Explore Azure Storage](#)
  - [Explore Azure Files](#)
  - [Explore Azure Tables](#)
  - [Explore Azure Cosmos DB](#)

### Submit

- Open a browser page on the VM, navigate to Canvas, and [submit](#) the screenshots of the completed tasks (4 screenshots on a single Word file).

[◀ Previous](#) [Next ▶](#)

[? Find help](#)

# Week 10 Tutorial Activity (Step-by-Step)

## Task 1 – Explore Azure Storage

What to do

1. Create a Storage Account
2. Create a new Resource Group
3. Select:
  - Performance: Standard
  - Redundancy: LRS
4. Finish creating the storage account

Important Learning

- Storage Account = main cloud storage container
- Resource Group = folder for Azure resources

Take Screenshot

Take screenshot after the storage account is successfully created.

# Week 10 Tutorial Activity (Step-by-Step)

## Task 2 – Explore Azure Files

What to do

1. Go to File Shares
2. Create a file share named:  
files
3. Use:
  - Transaction Optimized
4. Disable backup
5. Open the Connect option

Important Learning

Azure Files allows shared cloud folders similar to network drives.

Take Screenshot

Take screenshot showing the created file share.

## Task 3 – Explore Azure Tables

What to do

1. Go to Tables
2. Create table:  
products
3. Add entities:
  - Widget
  - Kniknak
4. Add properties like:
  - Name
  - Price
  - Discontinued

Important Learning

Azure Tables are NoSQL key-value storage systems.

Take Screenshot

Take screenshot showing inserted entities in the table.

# Week 10 Tutorial Activity (Step-by-Step)

## Task 4 – Explore Azure Cosmos DB

### What to do

1. Open Azure Cosmos DB section
2. Explore database features and options
3. Understand globally distributed databases

### Important Learning

Cosmos DB is designed for:

- High speed
- Global applications
- Massive scalability

### Take Screenshot

Take screenshot of completed Cosmos DB activity.

# Week 10 Tutorial Activity (Step-by-Step)

## Final Submission

## Create One Word Document

Insert:

- Screenshot 1 → Azure Storage
- Screenshot 2 → Azure Files
- Screenshot 3 → Azure Tables
- Screenshot 4 → Azure Cosmos DB

# Week 10 Tutorial Activity (Step-by-Step)

## Submit to Canvas

1. Open Canvas inside the VM browser
2. Upload the Word file
3. Submit before deadline

# Week 10 Tutorial Activity (Step-by-Step)

## Tips for Students

- ✓ Follow instructions carefully
- ✓ Wait for Azure resources to load
- ✓ Use lowercase names for storage accounts
- ✓ Take clear screenshots
- ✓ Do not close the VM during the lab
- ✓ Delete resources later if using personal Azure subscription

# Week 10 Tutorial Activity (Step-by-Step)

## Simple Summary

This week helps us understand:

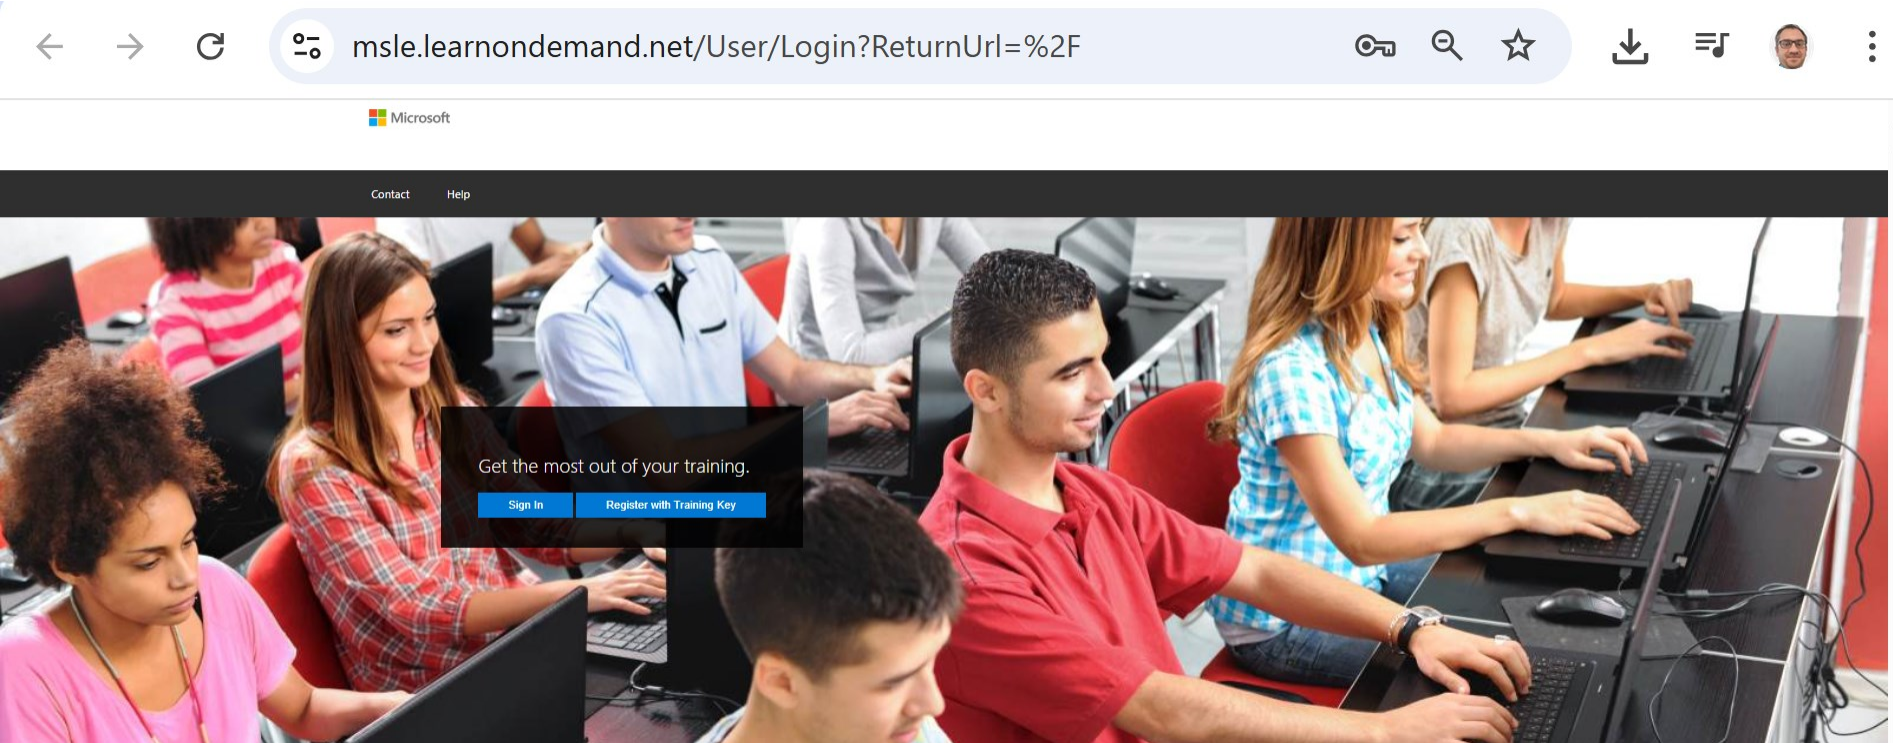

- How cloud storage works
- How companies manage large-scale data
- The difference between traditional databases and NoSQL systems
- Real cloud technologies used in industry today

These are foundational cloud computing skills used in modern IT careers.

# Week 10 Tutorial Activity (Step-by-Step)

- Log in at <https://msle.learnondemand.net/>

Use the same account from Week 8 – do not create a new one for week 10

# Week 10 Tutorial Activity (Step-by-Step)

- If already registered and you want to log in
  1. On the popup (as in your screenshot), choose **Skillable Account**.
  2. Enter the username/email and password you created when you first registered with the key.
  3. Once logged in, you'll see your training dashboard → then launch Explore Azure SQL Database.

How would you like to sign in?

Microsoft Account

Entra ID

**Skillable Account**

# Week 10 Tutorial Activity (Step-by-Step)

- If already registered and you want to log in

Don't pick Microsoft Account or Entra ID unless your lab instructions specifically require it — those are for enterprise logins.

How would you like to sign in?

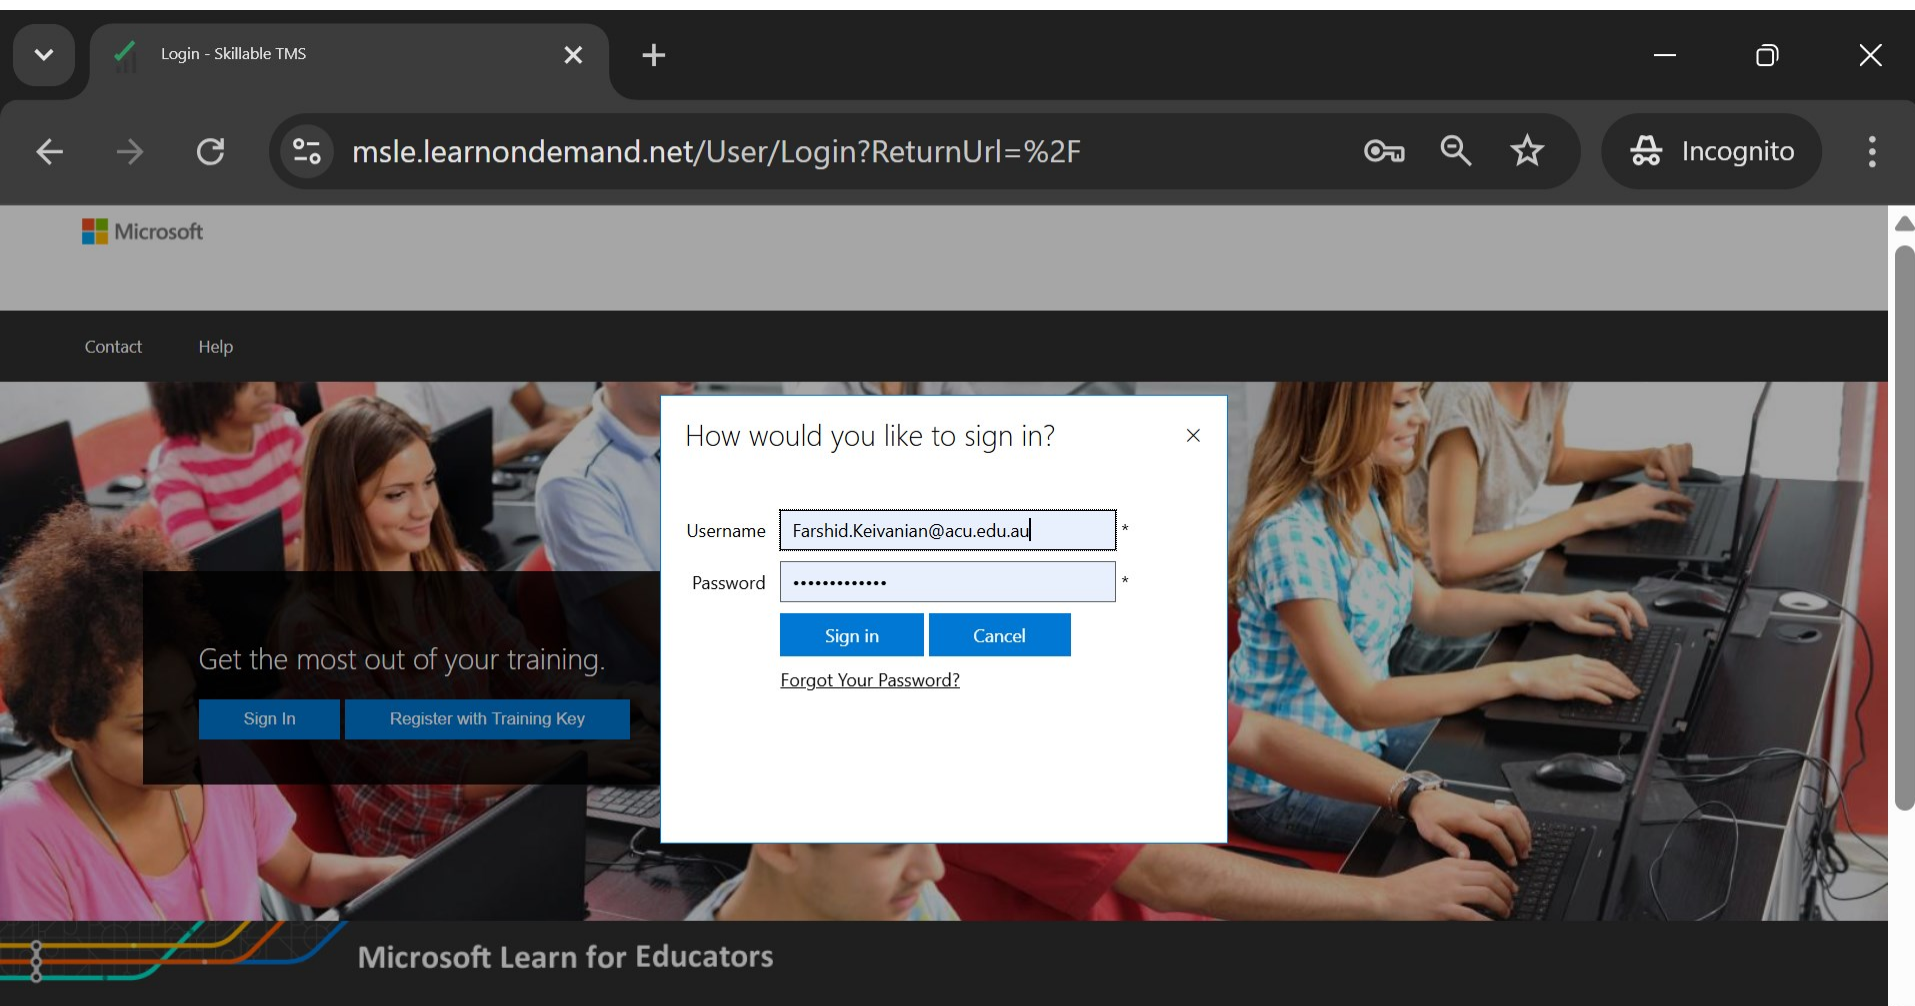

Microsoft Account

Entra ID

Skillable Account

10 of 10 launch attempts remaining

Explore Azure Storage for non-relational data

# Week 10 Tutorial Activity (Step-by-Step)

Wait 1–2 minutes for the virtual machine (VM) to load.

Lab Setup - Google Chrome

labclient.labondemand.com/Setup/3486a2cb-5a61-4338-b4bf-1eceafec84a6

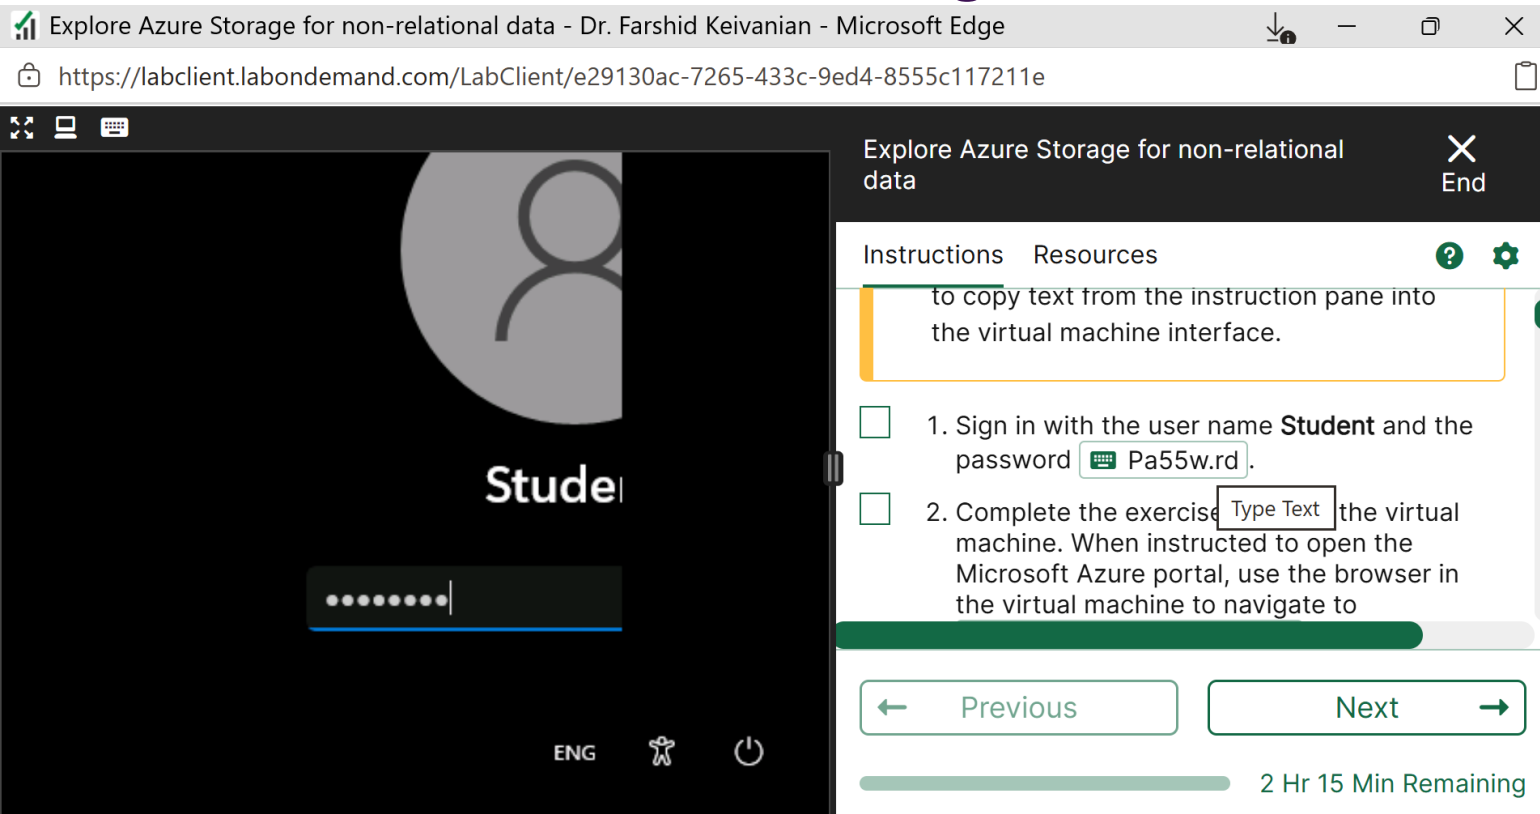

## Building

Your lab will be ready in about 1 minute.

Follow the on-screen instructions in the right-hand side window of the virtual lab to log in and complete the tasks as instructed

# Week 10 Tutorial Activity (Step-by-Step)

Click on the Password on the right-side screen

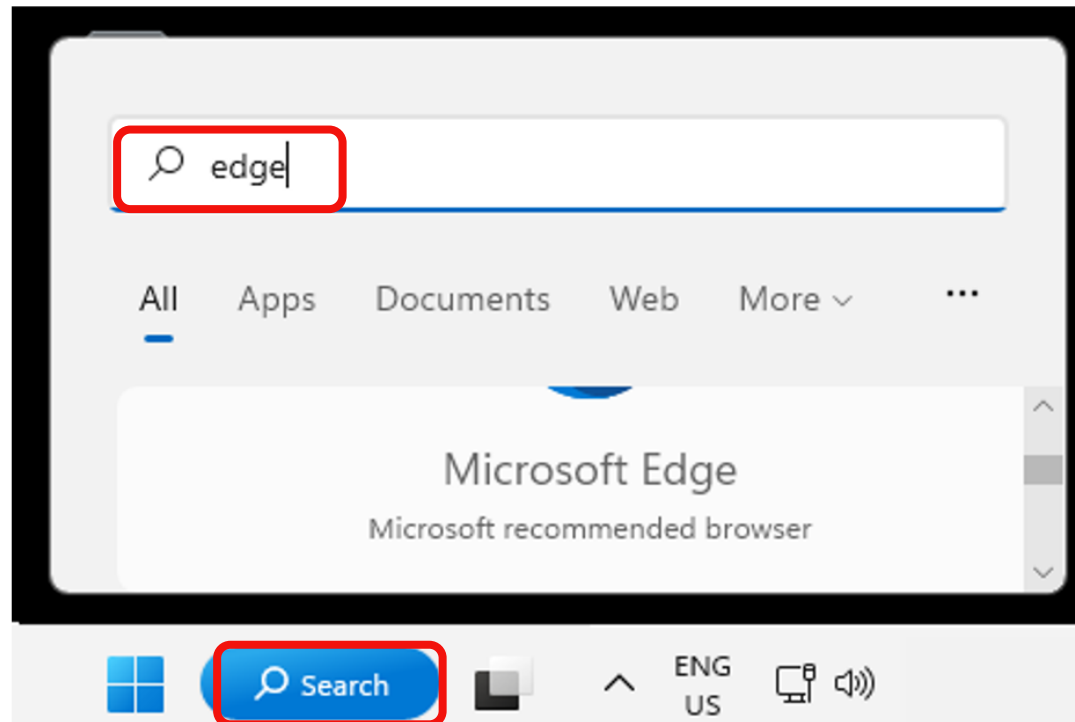

The screenshot shows a virtual machine window titled "Explore Azure Storage for non-relational data" in a Microsoft Edge browser. The browser address bar shows the URL: <https://labclient.labondemand.com/LabClient/e29130ac-7265-433c-9ed4-8555c117211e>. The virtual machine interface is split into two main sections. On the left is a dark-themed login screen with a large grey user icon, the text "Student", and a password field with seven dots. At the bottom of the login screen are icons for "ENG", a user profile, and a power button. On the right is a white instruction pane titled "Explore Azure Storage for non-relational data" with a close button (X) and the word "End". The instruction pane has two tabs: "Instructions" (selected) and "Resources". Below the tabs, the first instruction says "to copy text from the instruction pane into the virtual machine interface." The second instruction, marked with a checkbox, says "1. Sign in with the user name **Student** and the password **Pa55w.rd**." The third instruction, also marked with a checkbox, says "2. Complete the exercise **Type Text** the virtual machine. When instructed to open the Microsoft Azure portal, use the browser in the virtual machine to navigate to". At the bottom of the instruction pane are "Previous" and "Next" buttons with arrows, and a progress bar indicating "2 Hr 15 Min Remaining".

Important: Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

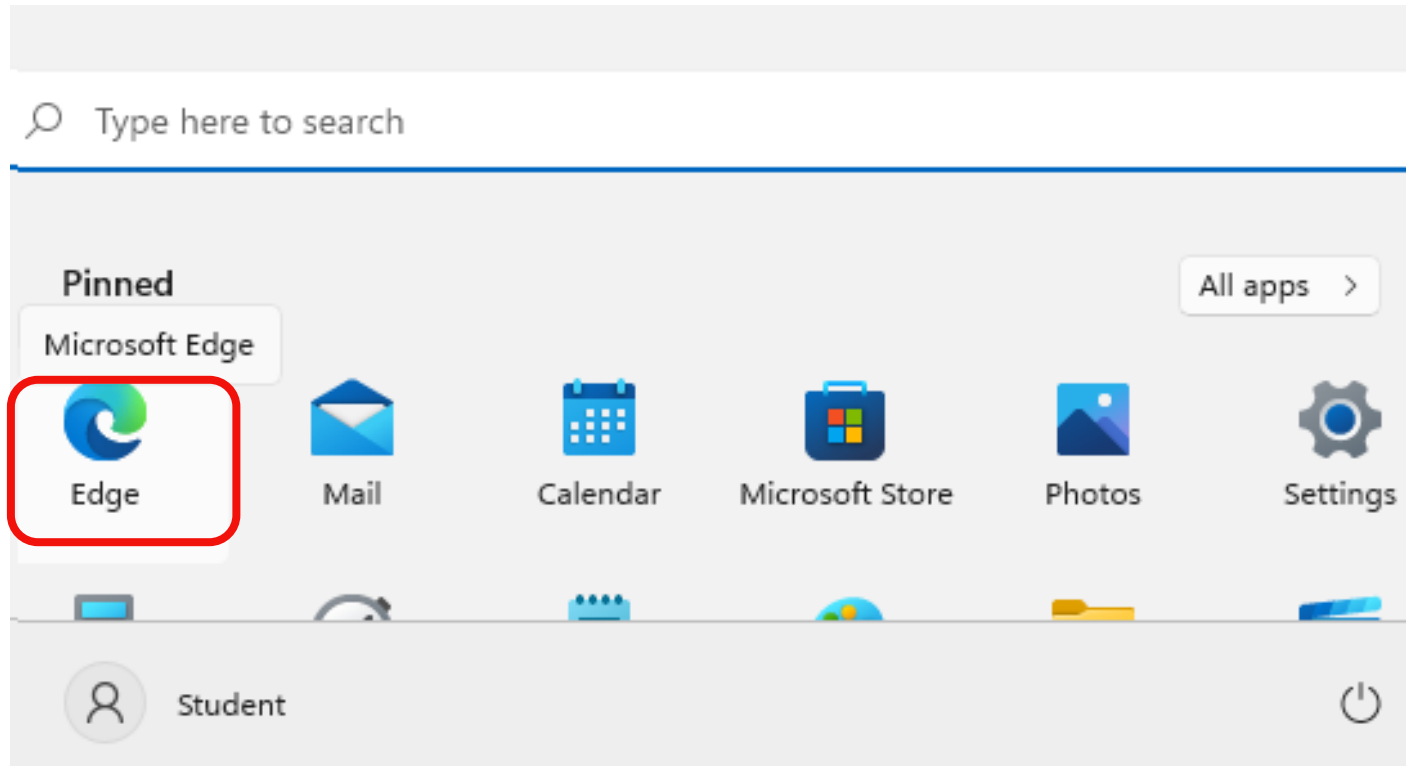

Search for Edge and Click on it

Important: Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

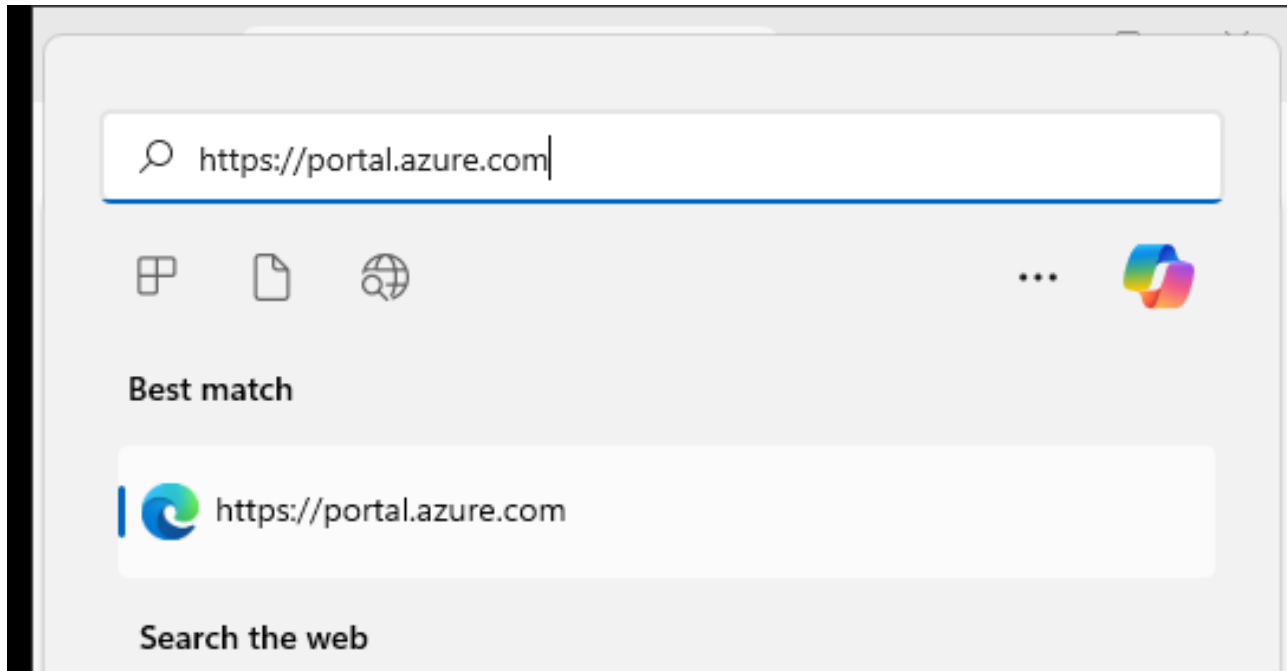

Search for Edge and Click on it

Important: Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

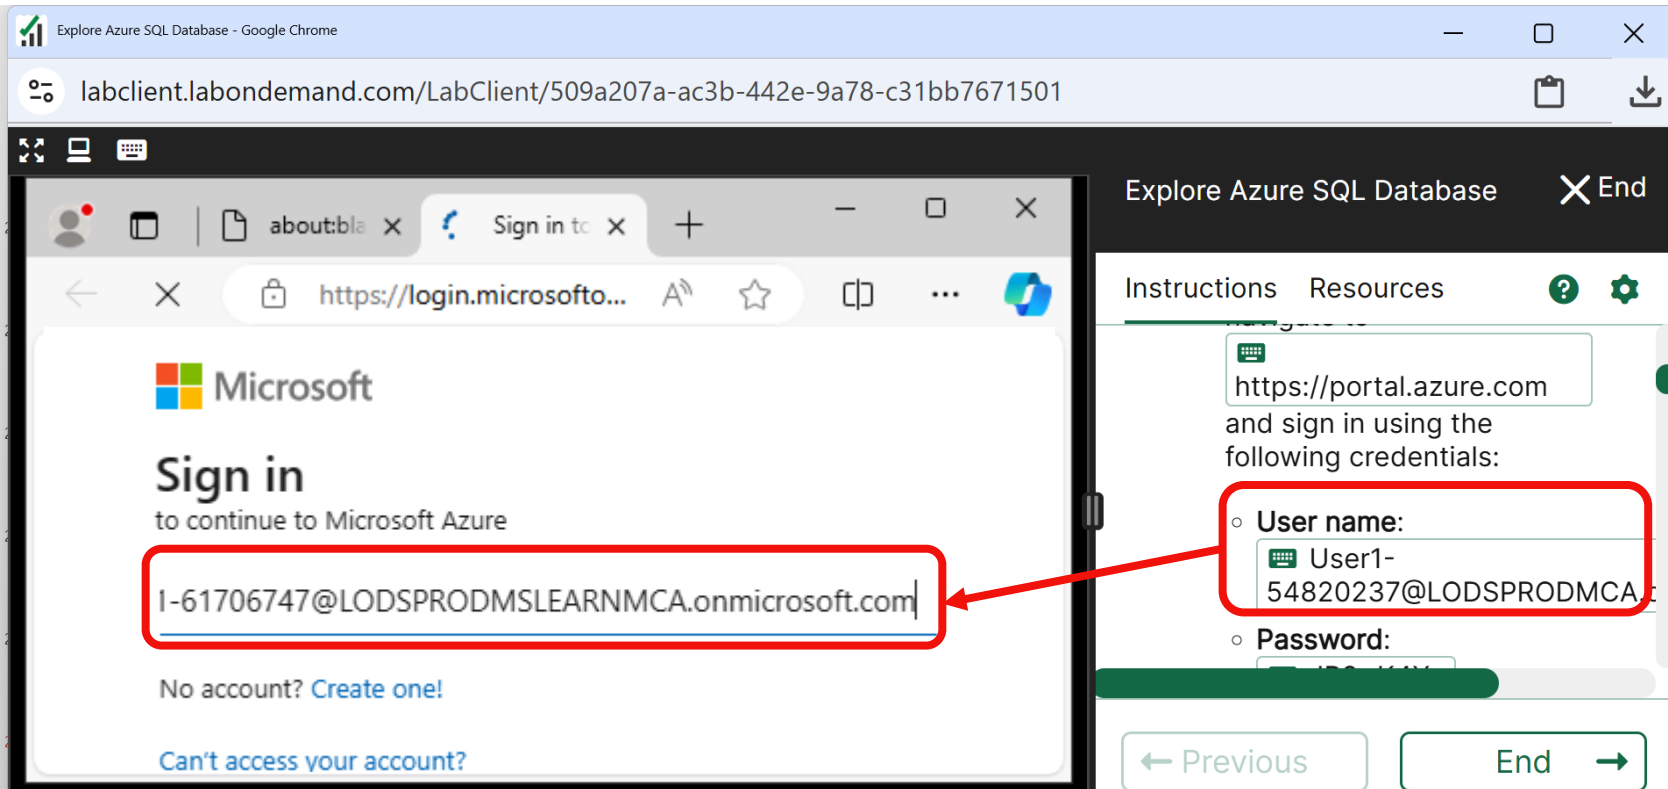

Click on Website (Portal); it is on right sidebar  
You will see this

Important: Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

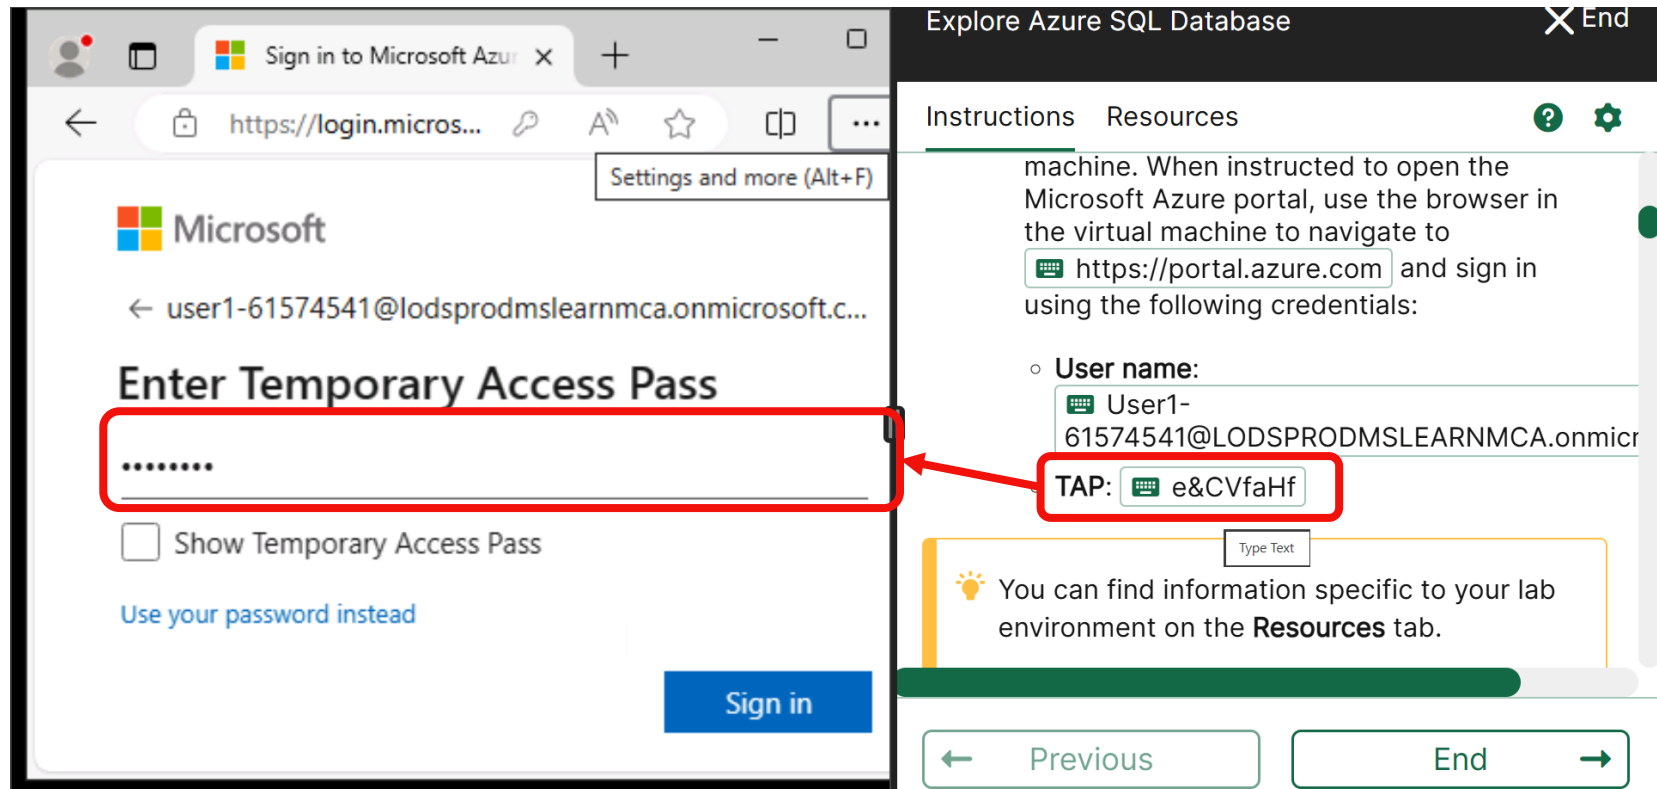

Press Enter; you will see this page

**Important:** Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

Click on User and Pass (on right sidebar) to log in

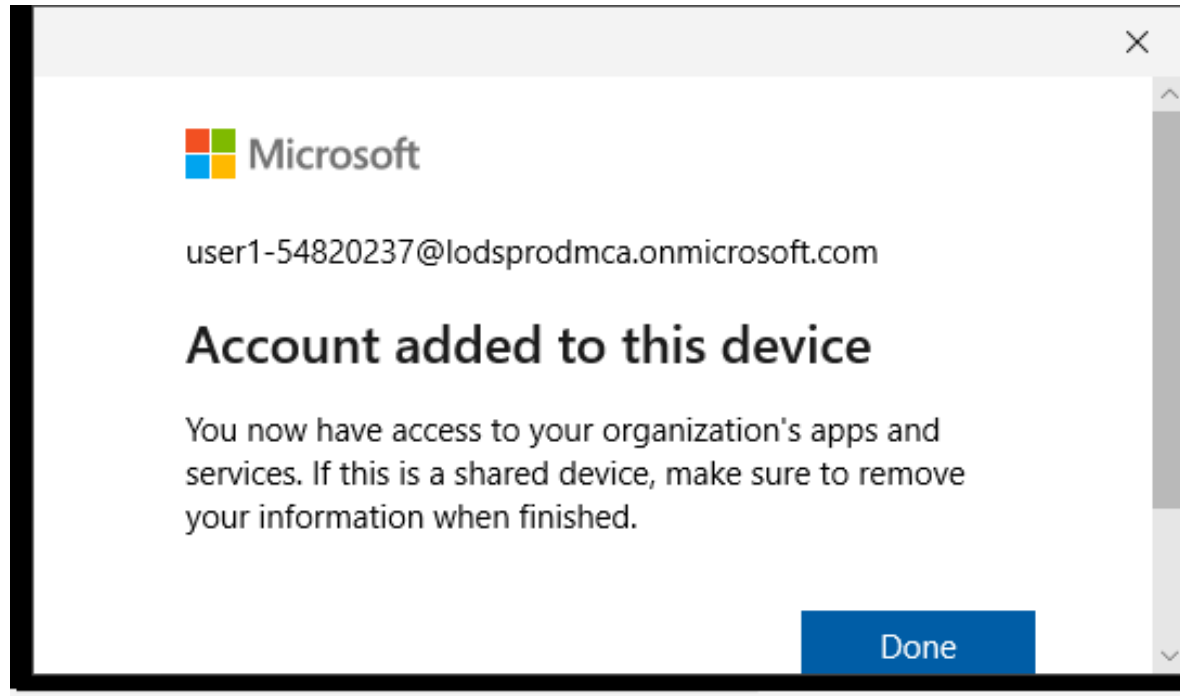

The image shows a split-screen view. On the left is the Microsoft Azure login page in a browser. The address bar shows 'https://login.micros...'. The page title is 'Microsoft'. Below the logo, there's a breadcrumb 'user1-61574541@lodsprodmslearnmca.onmicrosoft.c...'. The main heading is 'Enter Temporary Access Pass'. There is a password input field with a red rectangle around it. Below the field is a checkbox 'Show Temporary Access Pass' and a link 'Use your password instead'. A blue 'Sign in' button is at the bottom. On the right is the 'Explore Azure SQL Database' sidebar. It has tabs for 'Instructions' and 'Resources'. The 'Instructions' tab is active, showing text about opening the Azure portal. It lists 'User name:' as 'User1-61574541@LODSPRODMSLEARNMCA.onmicr' and 'TAP:' as 'e&CVfaHf'. A red arrow points from the 'TAP' value to the password field on the login page. At the bottom of the sidebar are 'Previous' and 'End' buttons.

**Important:** Do not open Azure Portal on your browser, instead run the virtual machine and then open the Azure Portal on the virtual machine's browser

# Week 10 Tutorial Activity (Step-by-Step)

Click Yes then you see this

## Create

The screenshot displays the Microsoft Azure Marketplace interface. The browser address bar shows the URL <https://portal.azure.com/#view...>. The Azure portal header includes the 'Microsoft Azure' logo and the user profile 'User1-61706747@LODS...'. The left sidebar lists navigation options: 'My solutions', 'Recently created', 'Private plans', and 'Categories'. Under 'Categories', there are links for 'Infrastructure Services (98)', 'IT & Management Tools (45)', 'Security (42)', 'Analytics (36)', 'Databases (30)', and 'Productivity (15)'. The main content area features two service cards. The first card, 'Storage account', is highlighted with a green icon and includes a description: 'Microsoft Azure Service Use Blobs, Tables, Queues, Files, and Data Lake Gen 2 for reliable, economical cloud storage.' The 'Create' button on this card is enclosed in a red rectangular box. A tooltip with the text 'Storage account' is positioned directly below the 'Create' button. The second card, 'Storage Account Using ARM', is associated with 'DIGISTORM LTD.' and describes an 'Azure Application storage account arm'. Both cards have a 'Create' button with a dropdown arrow and a heart icon.

# Week 10 Tutorial Activity (Step-by-Step)

## Create New Resource Group >> RG1

The screenshot shows the Microsoft Azure portal interface. The main heading is "Create a storage account". Below it, there's a description: "Select the subscription in which to create the new storage account. Choose a new or existing resource group to organize and manage your storage account together with other resources".

There are two dropdown menus: "Subscription \*" (showing "MOC Subsc") and "Resource group \*" (showing "ResourceGr"). Below the "Resource group \*" dropdown is a red box containing the text "Create new".

A modal dialog is open over the "Resource group \*" dropdown. It contains the text: "A resource group is a container that holds related resources for an Azure solution." Below this is a "Name \*" field with the text "RG1" entered. At the bottom of the modal are "OK" and "Cancel" buttons.

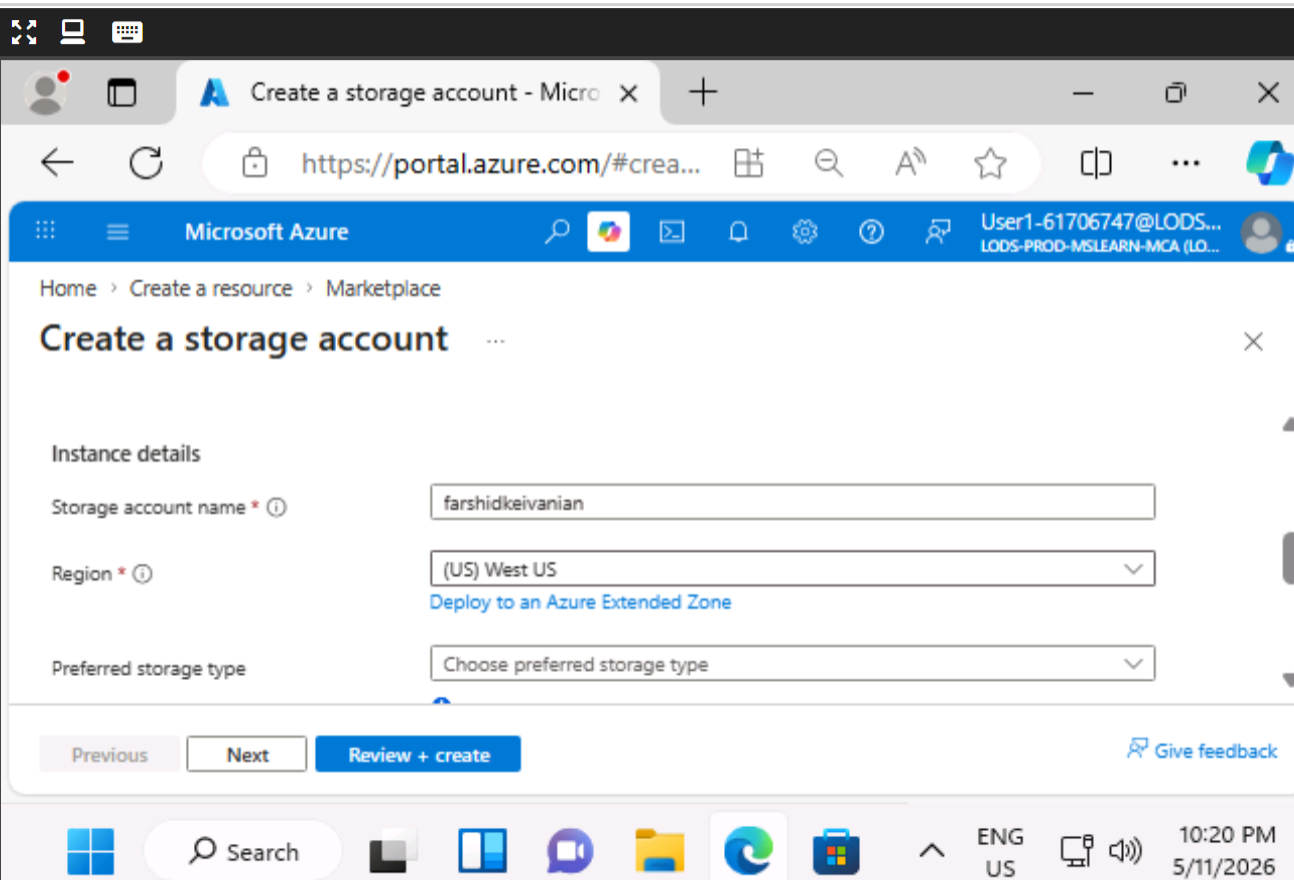

At the bottom of the main page, there are three buttons: "Previous", "Next", and "Review + create".

# Week 10 Tutorial Activity (Step-by-Step)

product1.json

# Week 10 Tutorial Activity (Step-by-Step)

You will see this page

The screenshot shows a Microsoft Edge browser window. The address bar displays the URL <https://labclient.labondemand.com/LabClient/e29130ac-7265-433c-9ed4-8555c117211e>. The page content shows a JSON file named `product1.json` with the following data:

```
{  "id": "1",  "productname": "Bearing",  "productnumber": "BA-83",  "color": "",  "listprice": 0,  "size": " ",  "weight": " ",  "quantityinstock": 1109,  "model": "",  "description": "",  "productcategory": {    "subcategory": "Parts",    "category": "Components"  }}
```

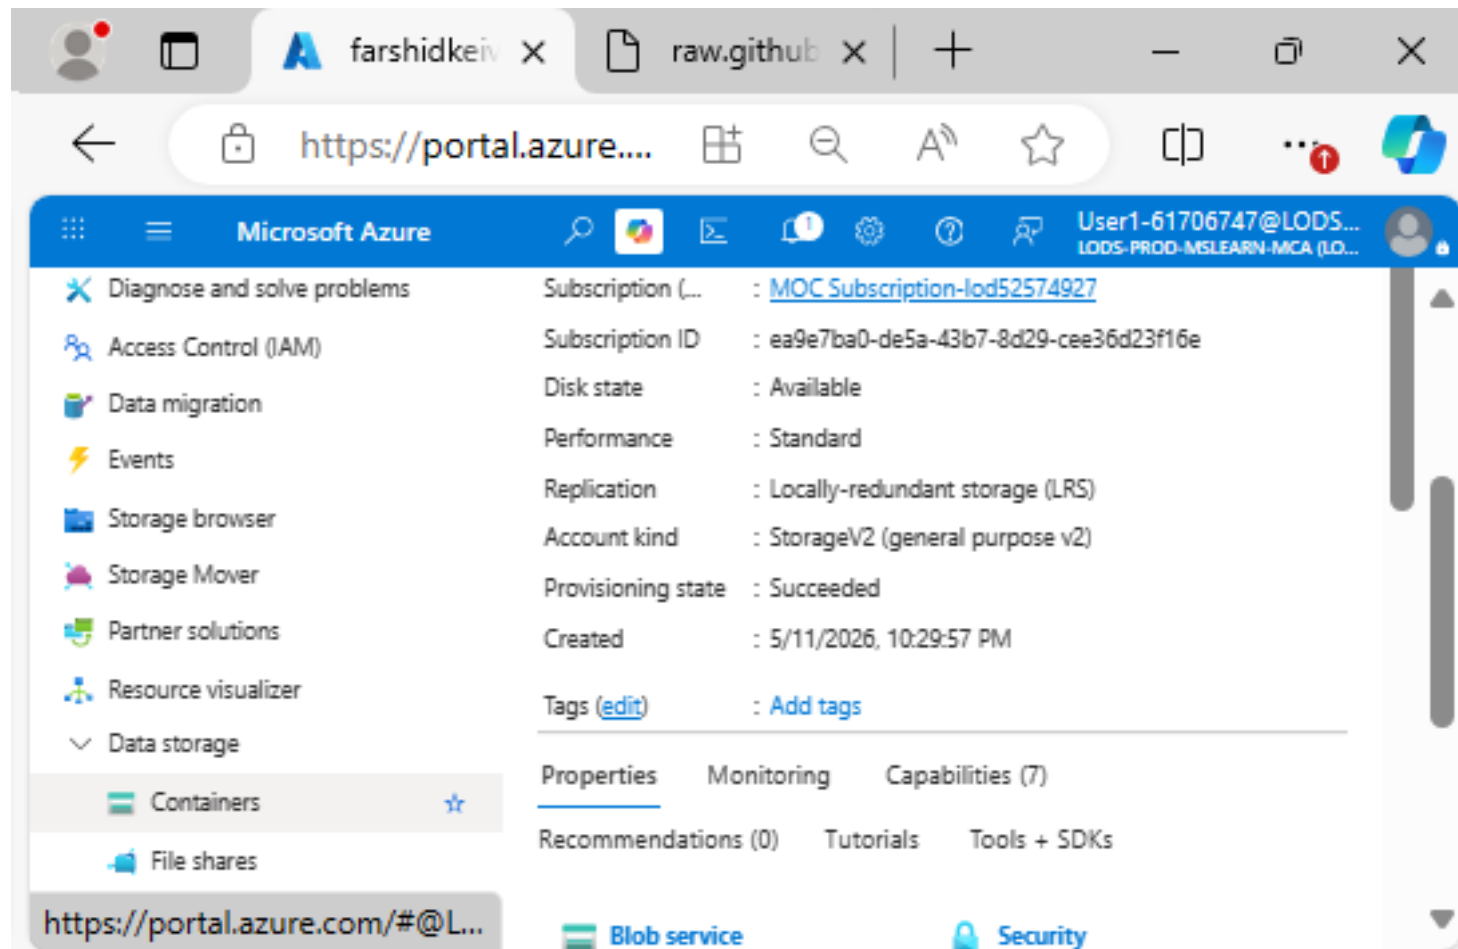

Below the JSON content, a 'Downloads' panel is visible, showing the file `product1.json` with an 'Open file' link. To the right, a tutorial interface titled 'Explore Azure Storage for non-relational data' is shown. It includes a navigation bar with 'Instructions' and 'Resources' tabs. The 'Instructions' tab is active, displaying a list of steps. The first step is: '1. Download the `product1.json` JSON file from `https://aka.ms/product1.json` and save it on your computer (you can save it in any folder - you'll upload it to blob storage later). If the JSON file is displayed in your browser, right click the page, and select `Save As...` to download the file to your local machine.'

At the bottom of the tutorial interface, there are 'Previous' and 'Next' buttons.

## Storage browser >> Blob containers

Explore Azure Storage for non-relational data - Dr. Farshid Keivanian - Microsoft Edge

https://labclient.labondemand.com/LabClient/e29130ac-7265-433c-9ed4-8555c117211e

The screenshot shows the Microsoft Azure portal interface. The left sidebar contains a list of services: Overview, Activity log, Tags, Diagnose and solve problems, Access Control (IAM), Data migration, Events, Storage browser (selected), Storage Mover, Partner solutions, Resource visualizer, and Data storage. The main content area displays 'Storage account metrics' and 'Blob containers'. The 'Blob containers' section includes a table with the following data:

| Metric               | Value |
|----------------------|-------|
| Number of containers | -     |
| Number of blobs      | -     |
| Total data stored    | -     |

On the right side of the image, there is a sidebar titled 'Explore Azure Storage for non-relational data' with an 'End' button. It contains two tabs: 'Instructions' and 'Resources'. The 'Instructions' tab is active, showing two steps:

- ☐ 5. In the pane on the left side, in the top section, select **Storage browser**. This page provides a browser-based interface that you can use to work with the data in your storage account.
- ☐ 6. In the storage browser page, select **Blob containers** and verify that your **data** container is listed.

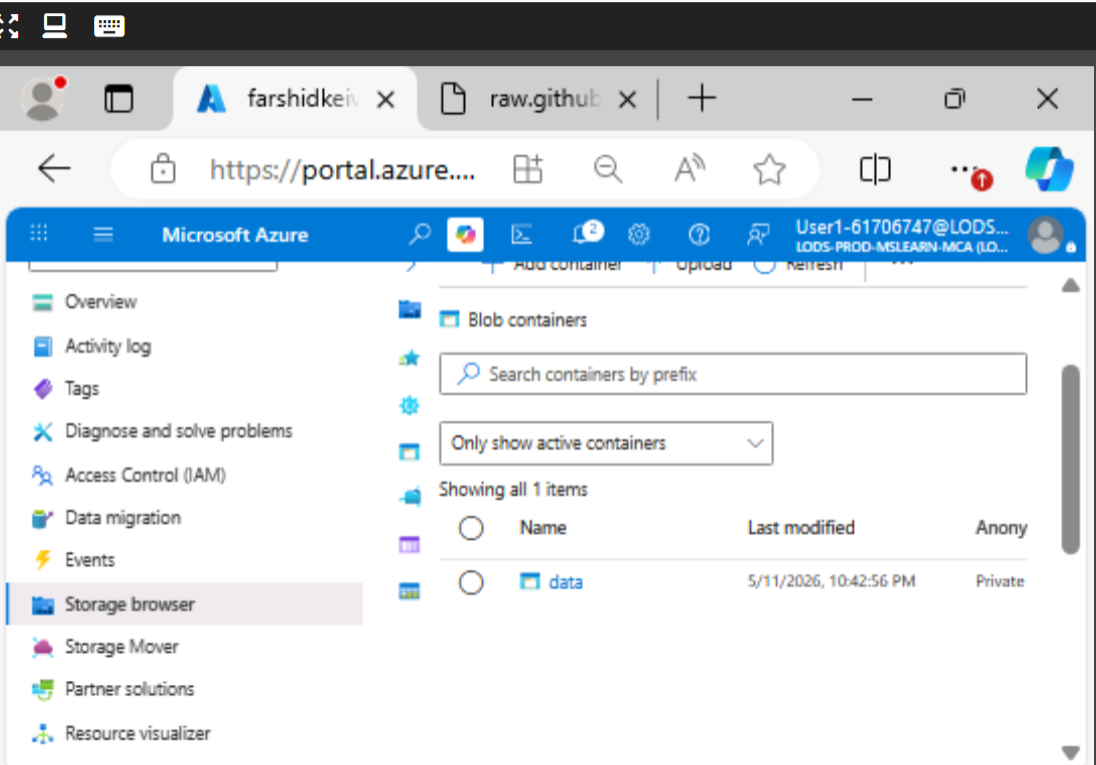

At the bottom of the sidebar, there are two buttons: 'Previous' and 'Next'.
